Production
David Abbey 261 8614
Steve Robinson 261 8678
Peter Riggs 261 8618Computer Weekly has a circulation each
week of over 82,000 including the highest
fully requested circulation in the UK.
The international edition, which is
published 10 times a year has a circulation
of over 94,000.Computer Weekly is sent free of charge to the
following categories in the UK and the only
computer directory, company directory,
management services directory, still
mainly responsible for computer
news, information, and analysis, and
advertising, IP Manager/Advertiser, system
analysis, and other services, and
operators, computer systems, and
equipment.Controlled Circulation Department (PC) has
been given a licence to distribute (1) 45
computer news, London 01-261 8500, Tel
01-537 3029. Subscriptions for the main
edition are £10.00 per year, UK £12.00
overseas £15.00, USA Canada £20.00, Europe

100% IBM compatible

UNDERLINING Hannover's pre-eminence as the world's biggest international computer exhibition, the organizers report that of the record 540,000 attending the show last month, well over one-third of those interviewed included the exhibits in the three COBIT computer halls on their list of essential displays to visit.

Visitors from 108 different countries and all continents attended the show, and the biggest surprise is that the small country town of Hannover, with a population of only about 500,000, manages to accommodate them all.

The number of circuit boards is reduced from 1098 on the 1100/40 to 160 on the 1100/60, and CPU floor space is reduced from 52 to 12½ square feet. One Megaword of memory takes up less than one-third of the space of 512K-words on the 1100/40.

The 1100/60 makes its debut at the National Computing Conference in New York at the beginning of June.

Model 7008-7008

- British design and manufacturer
- Based on 8080A Microprocessor
- Two-page Memory 3.840 characters
- 24 Displayed line of 80 characters per line
- Switchable Transmission Speeds from 60 Baud to 18,200 Baud
- Split Speed Transmission Mode
- Dual Interface - CCITT V24 and 20/80 mA Current Loop
- Hard Copy Printer Output
- Protected Field Format - Blink Background or Hell Brightness
- XV Cursor Address (send and receive)
- Roll or Page Mode
- Video Output for External Monitors
- Full Character Editing Features
- Block Transmission from Screen by Line or Page
- Green Phosphor Non-glare screen

Models 7001-7002

- 24 Lines of 80 characters per line
- Selectable Baud Rates from 50 to 18,200 Baud
- Dual Interface - CCITT V24 and 20/80 mA Current Loop
- Teletype Compatibility
- Hard Copy Printer Output
- Selectable Half or Full Duplex
- Video Output for External Monitors
- Green Phosphor Non-glare screen

Model 7000

- Teletype Compatible
- 24 Lines of 80 Characters per line
- Selectable Baud Rates from 60 to 18,200 Baud
- CCITT V24 Interface
- Selectable Half or Full Duplex
- Green Phosphor Non-glare screen

OP SPOT

Call for govt survey into effects of shift working

"THE government should carry out an in-depth investigation into the effects of shifts — not only in the computer industry but also in other areas where they are worked."

So writes Pete Rushton, a shift leader at Manchester University, in response to the fact that an operator was advised to give up shift work by his doctor, who described him as being in a state of permanent "jet lag" (Op Spot, May 10).

He goes on: "Operations staff should be given medical check-ups on a regular basis — I agree with you entirely on the matter. But might I add that a medical should be given to a person before he is actually taken on as an operator, in order to be sure that he is fit enough to work shifts."

According to Rushton, operations staff must be involved when the rota is worked out because, at some installations, the management just don't

appreciate what working shifts entails. "We are the ones who have to work the rota, and so we should have a say in which one is adopted, rather than have it thrust upon us by someone who doesn't know what it's all about."

At his installation, there are four teams, each comprising eight operators, working a 12-hour shift pattern to provide 24-hour cover seven days a week.

He continues: "We worked out our own version of the 12-hour shift system four and a half years ago and it works extremely well for us."

"We like the system because it gives us rest periods between shifts. This is good because a certain amount of time is needed to adjust and 're-charge' before starting the next period on shift."

"And our operators aren't constantly changing from days to nights, and vice versa, like the

unfortunate chap you mentioned."

Rushton makes some very interesting points and, in my view, the one about operator involvement in deciding upon a shift pattern, is of particular significance.

At one installation I know of, the operators worked days only until the ICL system was replaced by IBM kit and a two shift system was implemented.

Now a senior member of the operations staff — a person who, at that time, had no experience of shift work — insisted that the operators work a long day shift and a short evening shift. Despite the fact that several of them objected to it, the operators found themselves working from 8:00 am to 5:30 pm on days.

The theory behind the rota was that the short evening shift would enable the operators to make the most of their days off. However, the day shift was impractical for those operators

who spent at least an hour travelling to and from the site.

To his credit, the person responsible for the system conceded that he was wrong and a more conventional version of the two shift pattern was employed.

Pete Rushton has kindly sent me details of the shift system used at his site and I intend to use it in further discussions on shift work in this column.

Plain speaking

ONE of the great virtues of plain members of the operations team is the direct manner in which they put their views across. Consider the following: "An operations manager in a cereal processing plant has worked in both systems of programming but prefers the latter because of its day-to-day involvement in the real work. A shift leader on a power station says such a meaning is that I wonder why more of us don't write to you (Op Spot) tell you all about it. And, finally, an operator says: 'At our site security is an absolute joke — it's so bad that a 10-year-old with a stick could break in.'"

By Bernard Allen

HINT OF THE WEEK

Learning from past mistakes

ENDORING an Op Spot hint on the use of the hardcopy log as a means of learning more about both system and workload (Op Spot, May 10), and commenting further on the subject, DP manager R. W. writes: "We use a two-part hardcopy log. The top copy is handwritten, and along with the output, returned to the programmer or operations supervisor to be filed away."

"The second copy is the historical record and can be very useful in the event of a 'disaster' striking twice. Questions such as 'How did we get out of this the first time?' and 'Which version of the program ran?' can be answered by referring to it."

By Martin Banks

CA warns: 'be prepared'

THE move by Computer Automation to enter the "disposable" computer market (CW, May 24) adds further graveness to the growing distinctness that exists between minicomputers and microcomputers.

The Scout computer is going to be, as a company spokesman put it, "a minicomputer and a microcomputer price". He followed this by suggesting that several of CA's competitors will be shaken by its introduction.

Expected to be launched at the NCC in New York next week, typical Scout systems will cost around \$1,000 in the US. No pricing information is available as yet for the European market, where the system will be introduced some months after the US launch.

A typical Scout configuration is expected to consist of four of the eleven individual circuit boards that will be available, each of which will carry a different function of the system, such as interfacing, memory, and CPU.

Each board will have a self-diagnostic capability, indicated by a light emitting diode. The philosophy is that the boards will be inexpensive enough for defective cards to be discarded rather than repaired.

It is likely to use a new chip in the CPU, though no details of this are yet available.

Expanding

PLANNED expansion has led to the Robert Home Group, a supplier of quality papers and boards to the printing industry, installing a Univac 1100/12 system, valued at £1 million.

CIS-Cobol for Intel launched

MORE details are now available of the Vendor Supplied Programme of software support being initiated by Intel at the NCC next month with the launch of the Micro Focus CIS-Cobol compiler (CW, May 17).

The programme is expected to grow rapidly into a wide range of software products supplied by

VDU boost from IBM research?

VIOLET-ON-BLACK flat screen displays with attractive performance characteristics could result from research into electroluminescence which is under way at IBM's Hursley research centre.

The principle being applied is that certain compounds change colour when suspended in an electrolyte and the polarity is changed. Silver is one such, but is impractical for application in

computer displays because the switching process and colour change takes 100 milliseconds.

At Hursley, the addressing time has been reduced to four milliseconds and below using a derivative of a compound called viologen. Viologens are soluble salts and both ICI and Phillips have been working on different ones.

The idea is to use a matrix of silicon semiconductors to address each square colour unit in the screen directly, and IBM's progress was reported by Dr Donald Barclay at the laboratory earlier this month. Electroluminescent displays have several advantages. They are passive and have power-off memory. This means that not only does the information displayed remain visible without refresh until it is altered, but survives when the power is switched off.

Fall in price of software packages flattens out

THE cost of software for microcomputer systems continues to fall to the end user as the market for a particular program package broadens. It is, however, unlikely to fall much lower than the price being charged by Petsoft for a range of Adam Osborne programs.

An effective price of under 20 pence per program is being charged for a set of 78 financial and mathematical programs originally developed by Osborne, the American best-selling author on microcomputers and small systems software.

The set is available at £15, and the programs first appeared in Osborne's "Some common basic programs." They include mortgage amortisation, linear programming, future value of an investment, recipe cost and system reliability amongst other titles.

The set has been a year in conversion from book form to

cassettes capable of running on the Commodore Pet. They are available by mail order, direct from Petsoft itself, and will also be for sale through its 157 UK distributors.

For those requiring documentation and listings of the programs the book is also available for £7.50.

Printers ready and waiting
PRINTERS, at slightly lower cost and quicker delivery than usual, are now available from Abacus Computers in London. The company has obtained supplies of Centronics Mini, 781, 702 and 703 systems, Texas Instruments 810s and MEC Spin-writers. Prices range from £421 for the Centronics Mini through to £2,165 for a Spinwriter with keyboard. Deliveries are between 14 and 21 days.

Zilog Z8000 prices are released

PRICING details are available on the two versions of the new 16-bit microprocessor introduced by Zilog.

The Z8002, which is the version designed for software up to 64K bytes of memory, costs £100 each. It has been available in small quantities since the early part of March this year.

The Z8001, which is now expected to be available in September, will cost £130. This is the 48-pin version, the part which can directly address up to 8 Mbytes of memory. In both devices the same bus chip is used, with the seven address lines and segmental trap line required for the Z8002.

The Z8001 uses a memory segmentation technique to address 8 Mbytes, and this is controlled by a memory management unit that is not expected until towards the end of this year. Zilog is, however, due to give details of the device to produce a management unit using several general purpose devices.

Water processing equipment

TELEMETRY equipment for Yorkshire Water Authority to process water from the River Derwent for housing drinking supplies is being provided by Serck Controls Ltd, Leamington Spa which is a subsidiary of Serck (2D) Ltd, master station at Barnley. The system features 810s and 703 systems and linked to a Serck Chromi-colour plotter.

Great expectations
ADDING to the growing list of expected new products at this week's NCC, New York, is a new microprocessor-based management system from Fairchild, intended for use with the 6440 and 6445 microprocessors.

NCC '79 will delve into social effects of computers

THE National Computer Conference, to be held in New York from June 4 to 7, demonstrates that the US computer industry is belatedly broadening its perspectives. Quite a few of the speakers at the conference will address issues that go beyond the confines of computers.

Issues such as international data flow, the social effects of computers, the future of advanced as well as less-developed nations are all central topics this year.

In the past, the emphasis of the conference was markedly different: typical speakers talked about engineering techniques or software methods. That technical side of the industry is well-represented this year, but it no longer dominates the conference.

IBM president, John Opel, will open the conference as keynote speaker. Characteristically, neither Opel nor IBM will reveal the content of the planned speech.

Later that day Dr Willis Ware, of Rand Corp, will speak about computers and society, a topic that has been the object of his work for some time.

Tuesday's featured speaker will be Charles Light, head of Advanced Computer Techniques. His topic is to be future directions in computing. Light thrives on controversy, and so do his fans — there are many — and philosophical adversaries (there are many of those, too).

On the Wednesday, Congressman Charles Rose will speak on "Computers, law and public policy". Rose, more than any other person in the US Congress, has stated that America's future is tied to the wise use of computers.

His views, which may well be translated into law, could place the government in opposition to the desires of the industry as he examines social priorities in relationship to the needs of business.

Thursday's featured address has Dr Portia Isaacson speaking on "Personal computing — is it worth it?" Dr Isaacson is deeply involved in the personal computer business as the owner of computer stores and as a speaker on personal computing topics.

Other topics to be discussed at the NCC include Edwin Spievack's session on regulation and anti-trust control of computers and communications. George Michael will describe his experience with mass storage at the Livermore Laboratories, and Rein Turn is to hold a forum on privacy protection in transnational data systems.

At another forum, US foreign policy as it affects computer exports will be discussed under the chairmanship of Arthur Downey, and Edward Zimmermann will describe the way computers are used in the White House.

Other events include Gerald Engel's forum on teaching college students and professionals

Congressman Charles Rose believes America's future is tied to computers.

IBM president John Opel will be the keynote speaker.

Charles Light lectures on future directions.

about the ways computers affect society; James Albus's session on advanced industrial robots; Carolyn Landis' presentation on the status of women and minorities in computing; and Kadvivanathan Vairavan's discussion on the ways computers affect developing countries.

This year's convention is the largest yet, in terms of the number of exhibits, the size of the exhibits, the number of persons who are expected to attend and the number and variety of topics that will be presented.

But for most visitors, the importance of this year's NCC will be its quality, not its quantity. Americans, forced to think in global terms by oil shortages and political surprises, are becoming acutely aware that computing and data communications will have a great bearing on the conduct of international affairs.

The US computer industry, which has looked inward in the past, is now maturing. The NCC, which has sometimes lagged rather than led the industry, appears to be maturing as well.

...AND NOW, MORE OF HESH WIENER'S LETTER FROM AMERICA

Listening in to secret calls

TELEPHONE service personnel in the US — the people who answer complaints at local telephone company offices — may be subject to a little-known invasion of privacy: their telephones could be open to the ears of anyone in possession of certain secret telephone numbers. These numbers enable outsiders to listen in on AT&T employees.

For some time service personnel have been aware that supervisors may be listening to their business calls. This process is carried out in the interest of insuring high quality service, according to AT&T. It had been presumed, however, that this eavesdropping was confined to local managers in various AT&T offices.

It was believed, by most who had looked at the situation, that AT&T had achieved an acceptable balance between the desire for privacy on the part of employees and the need to monitor the quality of work performed by these employees.

Making fibre optics in the US.

Fibre optics for 1980 Winter Olympics

TWO fibre optics transmission lines are being installed in New York State. One will be used in the upstate town of Lake Placid, where the 1980 Winter Olympics will be held, while the other will run from New York City through several suburban cities to White Plains.

The Lake Placid installation will be temporary, and when the media have left after the

Olympics, it will be taken down. But the New York-White Plains line will carry thousands of audio links in regular commercial service along a route that is one of the busiest communications paths in the US.

The fibre optic cable is about 2 cm in diameter, but is the equivalent of several twisted pair cables each 10 to 12 cm thick.

The 24-mile link at Lake Placid consists of 12 fibres. Six of them will handle 288 voice communications channels, two will provide television links and four will be used as back-up channels.

The White Plains line is 30 miles long, and has repeaters about every three miles. It can handle 14,000 audio channels simultaneously.

The technical roots of today's fibre optics transmission systems go back 20 years to experiments at Bell Laboratories that led to the development of the laser. In 1976 a complete light transmission system was tested in Atlanta. The New York installations are direct descendants of the Atlanta experiment.

One of the most difficult problems to be faced by the developers of the light beam systems is the provision of small reliable lasers that work at infra-red wavelengths. Infra-red light has lower losses in the glass fibres. As such infra-red lasers are developed, the cost of light transmission is expected to drop sharply and usage of the new medium will increase.

Loans to S. Africa revealed

THE computer has taken a stand against racism. The United Nations Special Committee Against Apartheid has revealed the sources of \$5.5 billion in bank loans to South Africa, the most extensive list of its kind yet produced.

The project was completed with the aid of computers that sorted through and analysed thousands of facts to produce a unified picture of banking activities. The work was done by Corporate Data Exchange, a New York research organisation.

The UN group apparently is hoping that the publicity given to the banks and the governments that oversee them will eventually lead to restrictions against such loans. Ultimately, these restrictions could force the South African government to abandon policies which the UN group finds abhorrent.

When you're up the creek without a paddle, who can you turn to?

You can ride along on the crest of a wave for years keeping pace with the flood of advanced computer technology. Then, suddenly, you get a sinking feeling. The tide turns. An innovation comes along without warning and you're left high and dry. Phone Dicoll. We promise we can help.

PEOPLE AND EVENTS

PENSIONER Richard "Bumble" Wood, 88, enjoys the company of Denise Larier, a wiper with CMC of Hemel Hempstead, at a night out at the company's HQ. Bumble was one of 22 men, mainly First World War veterans, from the Royal Hospital in Chelsea who were invited to a bar

IDPM Midlands elections

MANAGEMENT consultant Jim Russ was elected chairman of the newly-formed Midlands Regional Council of the IDPM at a meeting held at Birmingham Chamber of Commerce last week.

The main aim of the council was to set up branches of the Institute in the Midlands and this is understood to be the first such attempt outside London following the merger between the IIP and the IDPM.

Other officers elected were: Peter Craig, vice-chairman; Colin Bailey,

secretary; David Cox, treasurer; Harry Holman, membership secretary; Paul Thompson, publicity; and Dave Close, education. The following were elected to serve on the council's committee — Peter Birley, T. Bodnds, Peter Craig, Roger Dawle, Karen and Steve Hazeldine, John Mingles, Mike Thornton, Ken Wagstaff and Chris Youett.

The next meeting will be at Metro House, Hagley Road, Birmingham on Tuesday, June 12. It starts at 7.00 pm.

UCSL reorganises sales and marketing

THE subsidiary of Unilever, UCSL Microsystems, has announced the appointment of specialists in its sales and programming divisions, and also a reorganisation following the acquisition of Pensons and Insurance Computer Services (PICS).

Kelvin Moon has become account manager in the sales team at UCSL. He joined the company from Data Recognition where he was a salesman. Mike Williams has also been appointed to this position. He has been in Luton, where he worked a two-year contract with ICT Central Africa, designing systems for the Zambian Ministry of Finance.

Assistant development manager responsible for special customer designed software is Margaret Powell. She will head a team of micro-

processors. Powell will be responsible for the design of programs for the M45 and M50 data entry

terminals. Prior to this appointment, Powell was head of computer and mathematical services for the Fire Research Station.

Carla Bedford, who used to work for an export agency in Manchester, has become marketing assistant for UCSL. She joined the company as secretary to the general manager, Bob Gilkes.

PICS, which was acquired last year, is taking over the business for the pension and insurance sectors being handled by other UCSL divisions.

As part of the reorganisation, Geoff Humphrey takes up the position of industry consultant within UCSL, with responsibility for consultancy and for identification of the market requirements.

Mike Judd will direct the reorganised PICS, and the new address is 5 St John's Lane, London EC1. Tel: 01-250 0812.

Ian Bacon, a former consultant with Gemini Computer Systems, has become manager of the recently opened office for Information Processing People, IPP (Northern).

Mike Davies has been appointed managing director of Wescode Equipment. He is a former management consultant specialising in international marketing and general management.

Don Dehard has joined Versatec as UK sales service manager. He was formerly with Computer Technology before becoming hardware project manager for Versatec.

Eddy Dalton has been appointed managing director of the new company, Wright Air Conditioning (Northern), which has been established at Leeds. A former Northern sales manager, Duncan Smith, has become sales director of the company, which forms the sixth service member of the Wright Air Conditioning network.

Several new appointments include that of Graham Kimberley from Cable and Wireless, Peter Furness from Marconi Research, Richard Galpin from Merck, Sharp and Dohme and Alan Derby an ex-freelance programmer. All join as sales people for the South.

In the North, the new appointments include that of John Golder, who is from Burroughs, Nigel Seed from John Thompson Engineering, Maureen Garwood, a former accountant with Sharples Photomechanics and Robert Allin, from White, Young and Partners.

By Judith Morris

Moon Eggman

Amand Shariff, manager of Burroughs large accounts marketing South London branch, is joining the company's international group at the Detroit headquarters. He is to be product manager for large systems. The new manager of the south London branch will be Peter MacLeod, who is currently Burroughs communication systems' promotion manager in the UK.

Vice president of FEACO

THE Management Consultants Association has announced the appointment of Cyril Brown as vice president of the Federation Européenne des Associations de Conseil en Organisation (FEACO). Brown is managing director of Annan Impey Morrell, a management consultancy firm, and was chairman of the Management Consultants Association in 1978.

Award for chip TV programme

The BBC Television History programme, "Now the chips are down," which examined the role and impact of microprocessors, has won an award for Goldwyn, who wrote the programme.

Goldwyn received £1,500 as winner of the General Category of the 1978 Technology Writing Awards. These are awarded by ITC Business Systems and the European Association of British Science Writers.

The awards were presented yesterday at a reception at the Savoy Hotel by Lord Hester Barkdale.

Barry Thompson has joined OEM sales division of Protea, previously manager of the local division of Perseus, and is Eggman, formerly an electronic engineer with Borel in Switzerland, has been made responsible for Protea computers in South Africa.

Manfred Amand has been appointed managing director of Data Recording German subsidiary, based in Munich. He will be responsible for controlling DEFA and service operations in Germany and Austria. Previously he held similar positions in computer marketing with AEG-Telefunken, Intel.

THE 3200 ERA HAS ARRIVED

Perkin-Elmer opens the next chapter in computing history. With the introduction of the Model 3220 — first processor in the new Series 3200 — the second generation of SUPERMINIS makes its historic UK debut.

Highest Performance

Perkin-Elmer introduced the world's first 32-bit SUPERMINI in 1973. Now, with a background of over six years practical experience from more than 2000 installed systems worldwide, the second generation Series 3200 arrives as other manufacturers are just launching their first.

The Model 3220 has full 32-bit architecture, a data transfer rate of 8Mb/sec, MOS memory in 256Kb modules up to an ultimate 4Mb, memory error logging down to chip level, cache memory and 128 32-bit registers.

Lowest Cost

With all these features and many more, the Model 3220 costs less than many currently available 16-bit systems, a major cost breakthrough. For the first time, this brings within economic reach of a wide range of users the speed, accuracy, power and I/O handling capacity normally associated with 'mainframe' computers.

Mature Software

To match the most advanced hardware, Perkin-Elmer 32-bit software has been refined and proven where it counts — in the field. This powerful software includes OS/32, a real-time, multi-tasking operating system, together with a host of language processors and utilities, including COBOL, globally optimising FORTRAN

VII, BASIC, CORAL 66, ITC transaction monitor and OS/MTM for multi-terminal program development facilities.

The 3200 Team

Perkin-Elmer, a Fortune 500 company, is world-renowned as a major manufacturer of high-technology optical, instrumentation and data processing products. The Model 3220 SUPERMINI is the latest evolution in the company's commitment to industry leadership and innovation. It is backed by years of field experience, fully-proven software and a team of dedicated professionals committed to making your installation a success.

Find out how the 3200 Team can help you. Return the coupon or call Jane Berry on Slough (0753) 34511.

London 25-28 September 1979
The European Conference on Applied Information Technology
A FOUR DAY CONFERENCE AND MAJOR EXHIBITION

Following the success of the 1978 IFIP congress in Toronto, Euro IFIP '79 will be Europe's most comprehensive computer conference.

More than 100 presentations from key experts and world renowned authorities. Some of the speakers are pictured above.

The conference will examine research and development, practical experiences and current problems in information technology.

1000 senior computer scientists and information systems users are expected to participate.

Plan on being there. Send for your conference brochure now.

DO YOU LIKE MY ENGAGEMENT RING?

OH, VERY TRENDY! IS YOUR FIANCE A COMPUTER PERSON?

YES, HOW DO YOU KNOW?

A SILICON-ON-SAPPHIRE RING!

cheap needn't mean nasty

With the new ADPS Regent 20

The practical, reliable VDU big in standard features but low in price because:
• The Regent 20 has full upper and lower case letters
• The Regent 20 has 256 and compact loop interfaces
• The Regent 20 has switch selectable upper/lower case letters
• The Regent 20 has printer interface
• The Regent 20 has line monitor mode
• The Regent 20 has multi-line screen

Now compare the price and you'll see you needn't be paying any more.
There's much more information in our 16 page brochure.

TIM PALMER ON THE COMECON COMPUTER SCENE

Do-it-yourself service is the Robotron rule

BECAUSE of the great distances between major centres in the Socialist countries, and the comparatively small population of mainframe computers, it is uneconomic for the supplier to try to provide a round-the-clock maintenance service. Do-it-yourself maintenance is therefore the rule for customers of VEB Kombinat Robotron, the East German enterprise which builds the most powerful computers in volume production in the

Comecon countries' Rjad unified range.

These mainframes are the ES-1040, which Control Data rates as comparable in power to the 370/145, although it is more like a large 380, and the ES-1055. The specification of the 1055 makes it a little more powerful than the 370/145, 0.45 mips compared with 0.43 for the 145, but Robotron plans to expand maximum main memory to four Megabytes, bringing it closer to the 370/155.

First delivered in 1974, the ES-1040 is the most successful mainframe in the Rjad line, with well over 200 installed, and between 40 and 50 to be built this year, as well as 11 ES-1055s.

Instead of providing maintenance to customers, Robotron trains the customer's own engineers, and the longest training centre is in Leipzig, where a teaching staff of 200 educate 2,000 students a year.

Since Robotron has installations or customers in all the Socialist countries, as well as Iraq, India, Cuba, Yugoslavia, Mongolia, North Korea — and Control Data in the US — the majority of the students going through the training school are foreign. Where it is necessary to give a course in a foreign language, interpreters generally have to be used, but the number of courses available in Russian and English is growing.

Robotron provides hardware and software courses at Leipzig, and also trains operators. For a mainframe installation, 10 operators and seven maintenance engineers are usually trained — and the students are put forward by the customer.

However, a minimum education standard is required, and preliminary tests are given. If students put forward prove unsuitable, the customer has to bear the cost.

As a result, Videoton is able to offer its customers as up-to-date a minicomputer as any available, and at Hanover showed its own version of the new SEMS Mitro 225 a few days before it was announced in France.

"We are very careful not to do anything to bring us into conflict with SEMS," says Dr Csaba Barath, exhibitions manager with Videoton. This effectively precludes straight minicomputer sales in the West, but allows Videoton to offer systems packaged with software for a particular application.

The two current Videoton minicomputers are the single-board VT 60, and the new VT 600, which comes on two boards and uses the Motorola 6800 micro in the peripherals controllers.

On the way is a version built using the AMD 2801 bit-slice micro which will appear as the VT 6000.

Half of Videoton's computer business is minis, including products like the Videopack simple, low-cost key-to-disk system. Based on the VT 60, it supports 16 keystations, which are little more than adapted Videoton TV monitors, which helps to reduce costs. As well as being sold in the Comecon countries, these have

Students undergo instruction in Robotron's training centre in Leipzig. "It makes a welcome change to get a girl on one of the courses," commented Holmut Steinhoff, headmaster of the school, in the foreground to the console of a Rusion-built ES-1022 computer.

In a planned economy, each sector is given a centrally-decided priority, and that given to computers in the Comecon countries is such that there is a shortage of computer hardware.

The shortage of hardware makes it tough for the students. "Hardware is our biggest investment," says Holmut Steinhoff, head of hardware technology at the school, "and we have to get maximum use out of it. Practical courses are run in three shifts, which makes it hard for the students who go on at midnight. But although they cannot perform at their

best, we have been doing it for years and it works, so we keep it that way."

Software courses run for weeks, hardware courses for 24 students per course.

As well as getting maintenance engineers, the customer gets a stock of spares, and take additional spares in standard complement of wishes. If a problem persists, Robotron engineers are available to give advice, and the Kombinat has a lot of 1,000, covering mainframe office computers.

Videoton sales to West soar

AFTER a slow start, sales of Videoton computer equipment and services to the West are beginning to soar, and the company has scored some solid successes in West Germany where it began its market thrust. Videoton is planning to sell \$180 million of computer equipment this year, up to 12% from last year, and 80% is exported, mainly to other Comecon countries. But Western business, accounting for \$10 million in 1977, grew fivefold last year and for 1978, Videoton has secured contracts worth \$10 million already.

Unlike its East German counterpart Robotron, Videoton chooses to license Western technology as a springboard into the

computer business, and has forged a close and successful relationship with the minicomputer division of CII, and its successor SEMS.

As a result, Videoton is able to offer its customers as up-to-date a minicomputer as any available, and at Hanover showed its own version of the new SEMS Mitro 225 a few days before it was announced in France.

"We are very careful not to do anything to bring us into conflict with SEMS," says Dr Csaba Barath, exhibitions manager with Videoton. This effectively precludes straight minicomputer sales in the West, but allows Videoton to offer systems packaged with software for a particular application.

The two current Videoton minicomputers are the single-board VT 60, and the new VT 600, which comes on two boards and uses the Motorola 6800 micro in the peripherals controllers.

On the way is a version built using the AMD 2801 bit-slice micro which will appear as the VT 6000.

Half of Videoton's computer business is minis, including products like the Videopack simple, low-cost key-to-disk system. Based on the VT 60, it supports 16 keystations, which are little more than adapted Videoton TV monitors, which helps to reduce costs. As well as being sold in the Comecon countries, these have

also a tape cassette unit of their own design, and the plasma display can be replaced by a CRT.

Software available includes a range of accounting packages and a text processing package, and the system is currently sold by Videoton in West Germany and Holland.

Mesa is also offering a modular CAMAC Computer Aided Measurement And Control system based on the Intel 8080 and built around the new standard ACS bus.

There is also an ES-1022, and an old R21, which is ES-compatible, runs under the DOS/ES operating system, but having been built in 1971, pre-dates the Unified Range.

Micro network to mimic 'foremen'

A NETWORK of micros designed to mimic the human organisation of a group of factories is being developed by Robin Woods, technical director of Inter-Woods, microprocessor specialists, of Luton, Beds.

Given the unlikely name of Mercator's Projection, Woods' system uses groups of Commodore Pests as "foremen" to supervise up to 20 Texas Instruments PM550 process controllers or to monitor laboratory instruments.

The Pests report to a factory level supervisor in the form of a cluster of two or three close-coupled minis. These would be Digital Equipment or Data General machines, or possibly Texas Instruments 9800s or DKS data exchange systems. Woods, an ex-Texas man, is familiar with the units.

The minis would share 50

Mbytes of disc store and each processor would specialise in different tasks such as processing for various levels of management or polling to find messages or files to be passed on.

Typically, three factory level clusters report to a similar division level cluster. This would have 1 Gbyte of disc store and handle communications between the network and the mainframe, selecting the appropriate path according to the type of link, for example, for transaction or batch processing.

Potential customers have IBM and Honeywell mainframes and Woods expects to have the Pests emulate IBM 2260 or 3270 display terminals for upward communication.

Typical systems would have about 80 Pests controlling 600

PM550s, with three factory level and one division level supervisor clusters. This could cost in the region of £1.5 million, depending on the interfaces. At factory machine level the interfaces would replace relay and analogue loop interlocks.

Woods says he is taking on people now to work on the project and thinks he is six to nine months away from his first orders.

Univac to 'buy in' advanced technology

WITH its research and development investment planned to be \$167 million this year, up \$9 million from last year, Univac has stated that a major part of this will be spent in acquiring advanced technologies such as Gallium Arsenide (GaAs) semiconductors, voice input/output systems, and Josephson Junction circuits.

As highlighted at a Univac seminar in Paris earlier this month, many of the technologies are a long way off, but in some areas, results are already being seen.

As previously reported (CW, May 17), Barry Borgerson, director of research and technical planning at Blue Bell, Pennsylvania, has predicted that Emitter Coupled Logic technology will give way to GaAs techniques within a decade on the company's top-end machine.

But the difficulties in manufacturing GaAs materials as such that Borgerson indicated that Univac would probably take the short route and buy in the technology from Rockwell International, a company he believes is doing good work on it.

To make the best use of new semiconductor materials, however, Univac is attempting to devise new wafer lithography techniques as well — particularly X-Ray and Electron Beam lithography.

With electron beam etching

we have already achieved sub-micron widths," said Borgerson. "We are hoping for one-tenth of a micron eventually. Our biggest problem is particle scattering which makes it impossible to etch a line the exact width of the beam you are using. You have to make allowances for this."

Already providing commercial income, a voice response unit, called the VRU-104, has been sold to the West German mail-order company Otto Versand. Seven will soon be installed and a further three by the end of the year.

The VRU-104 is accessed by phone lines, and customers input order information not vocally, but via a touch-tone keypad. This keypad converts electrical signals into audio tones to which the system is programmed to respond.

The nature of the response depends on what routine is being used, but all output from the VRU-104 is composed of digitised human speech held in memory, not of artificially synthesised sounds.

Regarding speech recognition, experiments are going ahead on a linguistic pattern-matching technique that will be able to accept both single words and sentences from a number of speakers. On the company's present prototype, an estimated recognition accuracy of 90% has been claimed.

And the 31's behaviour modification gives you a factory installed parsimony for an alternate ESC sequence lead-in — in addition to the

IDPM tidies up merger

AT an emergency meeting of the Institute of Data Processing Management last week, members were divided as to whether the secretary-general should be elected by the rank-and-file or appointed by the Institute's council.

Held in the Bloomsbury Centre House, London, the present secretary-general, Dr Cliff, argued that the holder of his office should be elected by the

full voting membership. This viewpoint won the day.

The meeting had been called to tie up constitutional loose ends arising from the merger of the former DPMA and the IDP.

The rule changes agreed now mean that the council can elect honorary fellows, subscriptions are payable on the anniversary of a member's election, that changes in subscriptions can only be made at AGMA.

Amateurs' 360 may prove to be white elephant

SOUTHAMPTON Amateur Computer Club has been offered an IBM 360, but this could be more of a liability than an asset, as club president, Paul Maddison, admits that the club could not raise the money necessary to maintain it by itself.

The system could be worth several thousand pounds, but unless the club finds a sponsor with premises and backing of up to £5,000 a year it will be unable to take up the offer.

The club started three years ago as part of the Southampton University students' union, and split off last year to enable outsiders to join. Its 120 members meet at the university on the first Wednesday of each month, except for the summer break from July to September. It invites

outside speakers from the micro industry, such as Paul Greenhalgh and Howard Birkett from Nascom who spoke at the last meeting.

Microcomputers owned by the members include three homebrew Z80 systems, three Nascoms, a Pet, a MK14 and a 0800 based homebrew system, but there has not been much activity in specialist groups based on each micro.

Encouragement for the big machine venture has come from the Galdor Centre in Surbiton, Surrey, which was started five years ago when four students bought an ICL 1301 for £200 in order to learn about computers. It now has two 1905Fs and a 1904E and runs overload work from other bureaux.

Buy the first page, get the second one free.

Our new smart terminal, the ADM-31, features a full two-page display as standard equipment. Not as an option. And its low cost and high reliability tell you it was made by those same people who make the world-famous Dumb Terminal™. But the 31's similarity to the Dumb Terminal adds with its dependability and rugged, proven case.

standard ESC. And End Block character. A New Line character sequence. A field separator. And even a function sequence preamble.

THE ADM-31 IS ALL KEYED UP.

The ADM-31's 91-key solid-state keyboard is integrated with the main logic, and can generate all 128 ASCII characters. And it features an integral numeric keypad, with period, comma, tab, minus and numerals. All arranged in a familiar calculator format.

The ADM-31 comes complete with character insert/delete, line insert/delete, erase to end of line/field/screen, back tab, and six standard sequences. All standard equipment.

And the Standard Edit option lets the ADM-31 clear to protected spaces, clear to unprotected nulls, and set and reset copy/print.

As if that isn't enough, the keyboard includes a caps lock key (to lock the keyboard into upper case only).

THE SMART CHOICE FOR A SMART TERMINAL.

After all this, you're probably thinking the ADM-31 is one of those smart ideas to come along in quite a while. We'd have to agree.

So if you're in the market for a new, smart display terminal, consider ours. Then call Lear Siegler, or contact your local distributor. We'll be glad to tell you all about our new ADM-31.

A terminal far too smart to be considered dumb.

The ADM-31 is just part of the new Lear Siegler range of high technology computer products.

Contact us or your local distributor for full details.

MARKETVIEW

BY FRED LAMOND

In March, IBM announced its new 1780 telephone switching system, a smaller and much cheaper version of the 3780 that has been sold in Europe since 1974. First customer installations, apart from pilot sites, in the first quarter 1980 will coincide with the general release (after P.O. trials) of the competing DEC SL-1, Plessey PDX and ITT Unimat stored program controlled private automatic branch exchange announced last year, as well as of the Post Office's own COS.

How significant are these new electronic PABXs? Do they just perform traditional telephone switching functions faster and more cheaply? Or are they an important step towards the much talked-about 'automated office' in which telecommunications converge with data processing?

In this Marketview Fred Lamond examines these questions and the relevant differences between the various manufacturers' new models.

THE functions offered on most stored program controlled private automatic branch telephone exchanges fall into three groups:

1. Traditional telephone line switching such as that handled by electromechanical exchanges.
2. Advanced telephone switching and monitoring functions which are not available on older systems but are still within the voice telephone switching domain.
3. Data collection, processing and file inquiry and update facilities. They bring some of the new PABXs closer to data and word processing.

The telephone switching functions are those that private telephone exchanges, both manual and automatic, like their bigger brothers in the public networks, have performed since telephones first appeared at the end of the last century.

The new all-electronic PABXs that have appeared on the Continent in the last three years, and are now appearing also in greater numbers in the UK, use either of two alternative switching technologies for these traditional functions.

Space division exchanges connect all incoming and outgoing external and internal lines to a three-dimensional matrix of

electronic flip-flop gates, through which the stored program controller then sets up discrete paths between any calling line and the line that it is calling.

As such this live connection path does not intersect with any other live connection path on its way, the voice signals can remain AC analogue in the 300 to 3,000 Hz range throughout their path, as they do in the voice telephone switching domain.

The IBM 3780 and the new 1780, ITT Unimat sold by STC, and, on the Continent, Ericsson PE, Philips EBX, and Siemens EMS PABXs are all space division systems.

The alternative technique is time division, and exchanges using this work on a completely different principle which is derived from the TD multiplexers used on pulse code modulation trunks in the public telephone network.

Each live voice line is sampled 8,000 times per second on entering the switch by a codec (coder-decoder), which turns the sampled tone into one of 256 predefined 8-bit codes, the result being a 84K bit stream. This is multiplexed with other bit streams from other active connections on a common system bus, which it leaves again on

reaching its destination output gate. Here another codec remodulates its signals back into analogue form.

Time division is regarded as the telephone switching technology of the future because it is simpler, and therefore both cheaper to manufacture and easier to maintain, more compact with savings in floor space and power consumption. The British Post Office's new CDS, GEC SL-1, Plessey PDX, and, in France, CIT-Alcatel Cledia and Telic 25.0x series, are all TD PABXs.

These differences in switching technology do not affect the ability of either type of exchange to offer more advanced telephone switching functions than the older Strowger and crossbar exchanges.

The alternative technique is time division, and exchanges using this work on a completely different principle which is derived from the TD multiplexers used on pulse code modulation trunks in the public telephone network.

Each live voice line is sampled 8,000 times per second on entering the switch by a codec (coder-decoder), which turns the sampled tone into one of 256 predefined 8-bit codes, the result being a 84K bit stream. This is multiplexed with other bit streams from other active connections on a common system bus, which it leaves again on

reaching its destination output gate. Here another codec remodulates its signals back into analogue form.

Stored program flexibility allows SPC PABXs to offer a host of more advanced functions such as dialling codes for frequently used numbers, both for the PABX as a whole and for extensions; teleconferencing facilities; automatic routing of incoming calls to a different extension on a temporary or permanent basis; 'hunting' for the first free extension out of a predefined group; camp facilities on busy extensions, with automatic call-back when they are free; programmed restriction of the extensions entitled to call senior executives or long distance or international outside lines directly and there are many other facilities on offer.

The SPC PABX can log the chargeable outside calls initiated from each extension and output such information in print or on a diskette.

All the new competing SPC exchanges support essentially the same range of advanced telephone switching and monitoring functions, though they differ in the expandability (Table 1).

Since these valuable advanced switching and monitoring functions result from the use of stored program control, rather than any particular switching technique, it ought to be possible to add them with SPC to existing installed crossbar PABXs, rather than take the equipment out entirely and replace it with an all-electronic system.

Another way of preserving existing investment in old electro-mechanical PABXs is to put the required stored program functions in each extension handset, instead of in the central switching system. This is what Nixdorf has done on the 8811 Datalink. An Intel 8080-controlled telephone handset combines advanced telephone switching functions with a variety of optional data entry and output modules.

The 8811 is available to West German PABX users, but has not been type-approved by other post offices. Nor is it likely to be in the UK, as long as the British PO maintains its insistence on a rigid separation between voice telephone handsets (which must be maintained by PO engineers, even when they are connected to a PABX) and data terminals (maintained by manufacturers).

The combination of data collection and file inquiry facilities with voice telephony on a common handset, as in the Nixdorf 8811, is an example of conver-

Automated phone techniques show flexibility

telecommunications and DP.

IBM offers similar facilities on the large 3780 switching system that has sold since 1974, and its new 1780 announced in March (CW, March 22) but in a manner acceptable to the British PO.

The telephone handsets connected to the 1780 and 3780 are conventional rotary dial or pushbutton multi-frequency handsets identical to those now offered by the PO to all subscribers, and thus easily maintainable by PO engineers.

But multi-frequency handsets can also be used to send data entry and/or file inquiry coded signals to a computer connected to the 1780 or 3780, after the 1780 or 3780 switch has first set up a switched connection.

not yet offer the software for this to its users.

So far, the 1780 and 3780 are still unique on the European market in the range of converging facilities that they offer.

In West Germany, Telefon and Normalbau, the telephone manufacturing arm of the AEG-Telefunken group, offers an optional data collection computer, the TENODAT 5000 or 7000, for interfacing to its TN-6030 TD PABX systems. Nixdorf offers the 8811 Datalink integrated voice and data terminal.

All other European telecommunications equipment manufacturers restrict their latest SPC PABXs to traditional and advanced voice telephone switching functions (Table 1).

direct computer file inquiry facilities from ordinary telephone handsets are unquestionably useful features, however, in any office equipped with its own computer system. To only two West German manufacturers have made a provision for it, apart from IBM and their systems are not currently available outside West Germany.

The British and French PABXs have not even taken advantage of their switching method to give terminals direct access to the system bus, on which data throughput of up to 64K bps could be achieved on the same time-slot as ordinary voice line.

	Technology	Traditional switching		Advanced functions						Converging functions

Table 1. Stored program controlled PABX facilities. SD = Space division. TD = Time division. Not a PABX, but an intelligent integrated voice/data terminal.

tion between handset and computer.

When it is a file inquiry requiring a computer response, the computer can send this via a voice output unit, which the inquirer can then receive through his telephone handset.

Or it can send it to a separate alphanumeric display or printer located within the immediate vicinity of the inquiring handset. This is not the only converging facility offered on the IBM 1780 and 3780. They can also be equipped with special interfaces for a number of other terminal units, such as identity badge readers and time clock.

The 1780 and 3780 offer special interfaces and communications protocols for all computer systems from IBM's General Systems and Data Processing Division.

The switching systems can send an extension user's file inquiry, or collected data, to a connected computer. The computer in turn can send dialling signals to the 1780 or 3780 to set up a temporary connection with any extension or with a distant terminal system, if necessary via the switched public telephone network.

IBM itself uses this facility for an internal company electronic mailbox system between its

It is true that in an age of ever cheaper programmable micro-processors, there are fewer and fewer arguments for sharing the control logic of a PABX among so many functions not directly related to voice telephony, as IBM does on the 1780 and 3780. And while IBM does not release such customer details, it is said that only a small proportion of its existing 3780 customers have taken advantage of the optional security and environmental control functions on their systems.

Data collection facilities, and

Instead, data terminals can be connected to these PABXs (except the TN-8030) via the same modems of up to 9,600 bps as on space division PABXs or ordinary public switched telephone lines.

It looks as if in the planning of the converging applications of the 1980s creative imagination and a capacity for looking at things in more important telephone switching experience and such creative imagination still found predominant among systems and terminal manufacturers.

Low costs of programming in UK offer excellent software market

LETTER TO THE EDITOR

HAVING spent a good part of my data processing career abroad, including seven years in Hong Kong as data processing adviser/manager with the Hong Kong government (the government data processing department was set up in 1968, not the six years ago you quoted), I was interested in your article on the growth of computer utilisation in the colony (CW, April 26).

The main reasons for the rapid increase in computer utilisation there over the past 11 years was the rapid economic and social expansion which started in 1968.

In the wake of the cultural revolution of 1967 combined with a shortage of skilled staff and the inability of the existing mechanisms to handle the escalating amount of work generated by this expansion (eg a 12-fold increase in the number of examination papers over a two-year period from 1968 to 1970), while the high quality of Chinese programmers did contribute to the rapid expansion in computerisation, the grave shortage of quality experienced staff actually inhibited development.

I would agree with Lee Tate and Richard Winstead that, on the whole, Chinese programmers are excellent but, before Alex d'Agapeyeff elai pack their bags and hot foot it to Hong Kong, let me sound a cautionary note about the feasibility of establishing a software development presence there.

Costs are much higher in Hong Kong than in the UK. Programmers' salaries are high, and even taking into account a possible higher rate of produc-

tivity, the longer working week (42 hours standard) and a willingness to work long hours, the unit labour cost is higher than here. In addition, office accommodation rentals are astronomical (on a par with downtown New York), hardware costs (purchase or rental and maintenance) are considerably greater and the costs of communication are a not insignificant element.

In 1968, largely on my recommendation, one of the world's largest (US-based) airlines established an application software production unit in the colony. It was closed down in 1971 because the overall cost of the programs written by Chinese programmers in Hong Kong was then greater than those written by American programmers on the Western seaboard of the States.

In the laissez-faire economy of Hong Kong where government regulation and interference is minimal, it would be very easy to set up a software company. This may not be the case in other possible locations. An attempt by a mainframe manufacturer to set up a software factory in Singapore in 1964 was killed stone dead by the intransigence of the immigration department there and a subsequent effort to establish one in India was frustrated by the dead hand of the cumbersome Indian bureaucracy.

The computer Press has recently reported that ICL and

Systime are considering subcontracting software development to India. These moves led Jim Donaldson, president of CSA, to comment that CSA did not have a protectionist view of its market and could not object to firms taking advantage of programming rates abroad. I don't think that Jim or his CSA members have much to worry about on this score.

My own recent experiences have led me to believe that the costs of programming in the UK

are now about the lowest of the developed nations. Consequently, there is an excellent market for the UK software industry in the production of software in the UK for Western European, American, Japanese and Middle East organisations (hardware manufacturers, software houses and end users).

Of the developing nations, only in India are the necessary manpower resources and facilities available and costs lower, but the advantages could well be offset by the inherent difficulties of Indian operations.

G. B. THOMSON
CAP (UK) Ltd,
London

Language translator arrives

NOW available in the UK is the Lexicon LK-3000 pocket-sized language translator (CW, February 1). It provides, for about £159, limited translation from English into languages such as Spanish, Greek, French and German. Stock phrases are

called up and linked together before the machine can give a translation on its one-line display, so the variety of words that can be used is limited.

Pre-programmed plug-in modules store the various languages.

US small firms go for IBM-compatible market

A GROWING belief that the future of the commercial computer industry is based on IBM-compatible software has caused a blossoming of small US companies all keen to get a share of the action.

The market leaders and pioneers are Andahl Corp and Iel Amdehl's 470V/5 to V/5 line cover IBM from the 370/158 to way beyond the 3033, while Iel's AS series goes from the 4341 to the 3052, with an attached processor option which approaches the power of the 3033.

All the other contenders are competing in the middle and low end of the mainframe market.

Two of the National Semiconductor each produce a bit-slice machine with minicomputer architecture and performance comparable with that of the 370/138. Kardos offer the Quo 70, based on the Intel 801/2, and Quo 60, based on the 8032, and matching the 370/138 and 148 respectively.

The forthcoming offerings from Cambridge Memory are also mini-type machines; called the CM-100/1, 2, and 3, they match the 370/138, 148 and 158.

The Magnuson M50/32 matches the 370/148 and the M50/42 and /43 cover the 4341.

The Magnuson line is fully field-upgradable and features what Magnuson terms 'strategic architecture', which means that the same basic modules can be mixed and matched to configure a wide variety of different machines, theoretically with interchangeable instruction sets.

IP Systems make the Omega 480s marketed in the US by Control Data. They have a unique architecture, which makes them field-upgradable through the line. The 480-I matches the 138, the 480-II the 148 and the 480-III the 158.

Nondata matches the 138 with the VMX200 and the 148 with the VMX400; the machines are a complex of processing units rather than a single processor. The main memory is central to the system, and is surrounded by several 'execution processors', each of which can be microcoded with a different instruction set.

The complex is completed with one or more input-output processors, which can simultaneously link to several instruction processors, and a supervisory processor which controls the operation of the whole complex.

Citel is planning to cover the power range of the 138 to 3033, but is still in the start-up phase.

With your experience, there's no better shape to be in...

You can see for yourself the shape Fiat are in just by looking at our cars. Our style is unquestionable and we have the hardware to back it up, as you'll quickly appreciate behind the wheel of our X1/9. And you could well be by participating in our attractive car purchase scheme. It's all part of getting your experience into shape with Fiat.

Of course, we're looking for a good track record from you... ideally, around two to three years' IBM experience, because you'll be working on IBM 370/38, supported by DOS/VS and POWER/VS, and PDP 11/70 supported by RSTSE.

In exchange for this experience, you'll receive a salary package of around £4600, which includes payments for working shifts, and subsidised canteen... and the car scheme we mentioned. Fiat's genuine promotion prospects will also be doing their bit to help your experience shape up to your own expectations.

For full details, please telephone or write to
Mrs. E.F.C. Watt, Personnel Manager, Fiat Motor Co. (UK) Ltd.,
Great West Road, Brentford,
Middx TW8 9DJ.
Tel: 01-568 8822.

European Technical Support Manager

Amsterdam

The European Marketing Centre of one of the world's leading manufacturers of information display and graphics systems wish to appoint a Technical Support Manager.

The successful candidate will liaise between the marketing centre and subsidiary companies (and distributors), assess all product parameters with respect to market demands and make relative and comparative studies on competitive products. Conventional management responsibilities will form a large part of the job, together with providing assistance and guidance to product support managers, sustaining a highly efficient technical support service and keeping in close contact with all hardware and software technology.

Applicants must have a technical degree (or equivalent) plus over six years software engineering experience with minicomputers and mainframes in systems software and FORTRAN based applications. At least two years direct management experience of a medium sized group in marketing support, software maintenance or project development is sought. English fluency essential and another European language desirable but not mandatory.

Very attractive salary and benefits, including relocation package.

Contact: Mike Cressler
JAMES BAKER ASSOCIATES,
International Personnel Consultants,
16 Maddox Street, London W1.
Telephone: 01-191 4478.

Business Systems Analysts

West of England £8,000-£9,000

Our client is looking for two senior Business Systems Analysts with successful track records of development and implementation of computerised manufacturing applications, preferably in an on-line/real time environment. One Analyst is required to lead primarily INVENTORY and PRODUCTION applications, while the second will concentrate on COSTING and FINANCIAL applications.

These are key appointments within a new data processing function and each analyst must be capable of setting up and leading major development projects. Top management has a demanding commitment, based on experience, in the use of computers, and full support will be given to development of applications.

The Company is a major electronics engineering organisation with a turnover approaching £30m, an explosive growth rate and microprocessor based products in established, world-wide demand. The appointments present an ideal opportunity for career development within and outside the data processing function.

Salaries will be in the range £8,000-£9,000, coupled with a comprehensive benefits package, and relocation expenses will be met by the Company where appropriate.

TO APPLY, please write briefly, listing name, address, age, home and office telephone numbers and career history to date, including current and previous employers, in complete confidence, to ANTHONY SPURR, Executive Selection Division, quoting 720/INV/PROD or 720/COST/FIN as appropriate. Applications from either sex.

Our 'Bugs' are light Sensitive!

Systems & Applications Programmers

Up to £10,000 now plus bonus

Technical Interviews-London, Manchester, Leeds, Liverpool, Birmingham, Stafford.

UK based opportunities exist for programmers with the right qualifications or potential to earn £6,000 to £10,000 now, and up to £16,000 after two years. These are long term positions, most of our staff have been with us for over five years. In our dynamic and flexible environment, career development will be upwards or across or into new areas such as Sales or Marketing.

The company

Allergo Software Limited is one of the world's most successful suppliers of software products to users of IBM 360/370, 303X, 4300 and compatible mainframes. We develop, implement and maintain some of the most advanced and efficient products available on the world's markets. To complement the quality of our products, we provide technical support of the highest quality to ensure that our users obtain the maximum benefit from our systems. Systems such as the SHADOW II teleprocessing monitor; the GUTS Time Sharing, Text Editing and CRJE system; the QUOTA II On-Line Source Program Library and Maintenance system; the CPG On-Line Program Generator; the OPLS On-Line Order Processing system and the DATA-MAN Report Generator.

The job

Continuing rapid expansion means that we have opportunities for technical staff in both our London and Stafford offices to join following teams. Full relocation assistance will be given.

PRODUCT DEVELOPMENT

As a member of the development team you will be involved in the development of new software products, the development of new features or enhancements to existing products or the implementation of existing products on new IBM or IBM compatible mainframes and other advanced devices.

As part of one of the most creative software teams in Europe, you will have the opportunity of working in project teams or alone, gaining from and contributing to the wealth of experience of this friendly and highly motivated group of technicians.

Development work is all on-line using our 3270 and 3271-700 terminals.

SOFTWARE SUPPORT

You will have the responsibility of maintaining the company's well earned reputation in this all important aspect of software marketing.

You will be involved in pre-sales advice, guidance and consultancy, post-sales product implementation and training. You will also be in close contact with users and our Agents worldwide, identifying, reporting and solving problems.

As a member of the support team you will enjoy considerable job satisfaction in a flexible, extremely interesting environment. The scope for extending

your knowledge and experience of a wide variety of systems and installations is virtually unlimited. Your knowledge of our products, user base and user requirements will also provide you with the opportunity to transfer to the development team in the future.

T.P. APPLICATIONS

The TP Applications team will provide you with the opportunity to work on a variety of new SHADOW II applications for customers. You will also be involved in advising and advising U.K. and overseas clients in the conversion of their systems from other T.P. monitors such as CICS, to SHADOW II. The wide range of applications environments of some of the most advanced installations in the U.K. will provide invaluable experience for programmers who wish to advance their careers rapidly.

The skills

SYSTEMS PROGRAMMERS. A good working knowledge of teleprocessing in a DOS or OS environment is required. Assembler experience is essential. COBOL, PL/I and/or Database experience are all added advantages. APPLICATIONS PROGRAMMERS AND SENIOR PROGRAMMERS. A strong Assembler background is required if you wish to join the Development or Support teams.

For the TP Applications Group you should have On-Line Applications experience in either Assembler, Cobol, PL/I or RPG II.

The rewards

Salaries well above the industry level. Significant annual bonus. Full relocation expenses for the right people. Regular opportunities for travel overseas — U.S.A., Canada, Europe. Full product training. Half yearly salary reviews. Friendly informal environment. Continuing job interest. Dynamic and reward-oriented company.

MAKE A CAREER WITH THE MARKET LEADERS.

Interviews will be held from 21st MAY in London, Manchester, Liverpool, Leeds, Birmingham and Stafford.

Our Development and/or Support managers will be available to discuss your career opportunities.

As a first step to arrange an interview in your area, please send your C.V. by or telephone calling (01-439 7871) to: Mr. Baker, Allergo Software Limited, 5th Floor, Imperial House, 10-12 Kingsway, London WC2B 6UN, 01-439 9075.

Accounts Systems Officer

GUILDFORD

We are an old established composite insurance company with assets in excess of £140M.

Expansion and change has led us to create a new position — ACCOUNTS SYSTEMS OFFICER. Reporting to the Home Accountant, the successful applicant will be responsible for designing and implementing accounting systems and for daily liaison with the Data Processing Department.

The ideal candidate will have two years' experience of systems analysis and programming with some of that time on accounts work. A working knowledge of accountancy is essential. Applicants should be capable of working on their own initiative and of clear communication.

We offer a competitive salary and the usual benefits associated with a large financial institution.

Write or telephone for an application form to: Mrs E. Watts, Personnel Manager, Cornhill Insurance Co. Ltd., 57 Ladywood, Guildford, Surrey GU1 1DP. Tel. (0483) 89181.

SENIOR COBOL PROGRAMMERS

West London to £7000+ Benefits

A major retail group with an expanding installation is seeking several Senior COBOL Programmers with a minimum of 3 years ICL 1900/2900 experience. The Company operates a retail distribution system with considerable real time involvement, thus offering the opportunity for people with solid experience to gain valuable Real-time exposure.

They offer very good salaries with considerable benefits including staff discounts, non contributory pension and a subsidised staff restaurant.

Reference BP 22/8

JUNIOR COBOL PROGRAMMERS

City to £6000+ Mortgage

A major financial organisation operating a twin ICL 1900 series installation is seeking several Programmers with a minimum of just 12 MONTHS' COBOL. The Company is involved in a number of new financial systems so any experience here, although not essential, would be more than welcome.

In return they offer very good salaries, 60p per day L.V.'s, 4 WEEKS HOLIDAY, and a 32-HOUR WEEK, and if that is not enough then consider their 3% MORTGAGE scheme!

01.439.7871 Reference BP 22/9

JUNIOR SYSTEMS ANALYST

City to £6,500+ Mortgage

A major financial organisation operating an ICL 1900 installation which will be updated to an ICL 2980 by the end of the year, is seeking a Junior Systems Analyst who is looking to expand on their current experience.

The minimum requirement is 18 months' systems experience gained on any hardware. A programming background would be useful although not essential.

The Company offers a very good starting salary together with extremely good fringe benefits including a 4% MORTGAGE, BONUS, FREE LUNCH, season ticket loans, non-contributory pension etc.

Reference BP 22/10

SYSTEMS ANALYSTS

City to £7000

A major finance company based in the City wishes to recruit additional staff to work on the development of new projects for their expanding IBM 370 system.

The individuals they are seeking will have at least two years analysis and must have implemented one major system. Any knowledge of CICS or PL/I would be a distinct advantage.

In addition to a highly competitive starting salary the company offers an attractive benefits package and excellent working conditions.

01.439.7871 Reference BP22/11

OPERATIONS SUPPORT

Sidcup to £5000

A large International Organisation based in an easily accessible part of N.W. Kent is currently looking for staff at various levels for their expanding technical support department. A minimum of 1 years operating or data control experience is required, preferably with some IBM OS JCL knowledge, although this is not essential.

The installation is linked via a Data 100 network to a large 370/158 running under OS/VS1. The technical support department operates a flexitime system and therefore this is an ideal opportunity for operators to move from shift work into an interesting and demanding days only position.

There is a recognised company career path which includes the possibility of moving into programming in the future. Excellent staff benefits include discount on a wide range of products, staff restaurant, and an active sports and social club, one of the amenities being a swimming pool on site.

DATA GENERAL NOVA
2000 p.w.
Data General Nova Algol & RDO's experience to work on Management information systems.

2000 p.w.
VMEB experience. 3/6 month projects.

PDP PROGRAMMERS
HOLLAND
PDP Programmers with TRAX exp transaction system. 3 months' initial contract.

SYSTEMS PROG
£5000 p.w.
RSX11M systems programmer to work on a packet switch project and system internals. Preferably knowledge of French, German or Dutch.

INTERVIEW LEVEL 6
£500
Level 6 expertise with T.P.S. combined UK + USA project.

ADAPTATION
HOLLAND
Singer system 10 expertise is needed with stella package experience.

TELEPROCESSING
£5000 p.w.
Teleprocessing, writing functional and interface specifications.

DEC PDP
HOLLAND
DEC PDP using Fortran under RSX11M: Traffic control project. 3 months' initial contract.

SMALL BUSINESS
HOLLAND
Small business systems experience. Preferably knowledge of low level protocols. Initially 3 month contract.

BANKING EXPERIENCE
£5000 p.w.
Banking experience. Project planning software documentation. Knowledge of COBOL. Preferably large mainframe exp. Fluent French.

MOTOROLA 6800
HOLLAND
Motorola 6800 with MPL Assembler 3 months initial contract.

KN. OF PROTOCOLS
HOLLAND
Kn. of Protocols X25 HDLC exp dly. level protocols. Conversant at all levels management.

PDP MUMPS
£5000 p.w.
PDP Mumps exp. commercial applications 1 year project.

SYS 3/RPGII
HOLLAND
SYS 3/RPGII exp. commercial applications. Maintenance and development. 1 year + assignment. Fluent French.

IMPLEMENTATION
HOLLAND
Implementation experience on machine interface via visual display.

WORKING ON PDP II
£450
Working on PDP II hardware. Expert knowledge of RSX11M. To install RSX11 at installation.

CHALLENGING POSITION
HOLLAND
Challenging position to install and coordinate D.P. department: Management exp essential.

KNOWLEDGE OF WORK PROCESSING
HOLLAND
Knowledge of work processing systems and their functions.

NEW DEVELOPMENT OPPORTUNITIES

PROJECT MANAGER
ANALYSTS
PROGRAMMERS

- ★ Discretionary bonus
- ★ Subsidised restaurant
- ★ Contributory pension scheme
- ★ Sports and social club — Subsidised bar!

Major group with subsidiary companies operating internationally and manufacturing a wide range of sophisticated industrial equipment has exciting future plans. Retaining IBM 370 hardware, they are currently installing CICS and have various projects planned including a major financial one. A mini computer is also being installed for a Midlands depot, with support from London.

Chief Systems Analysts is sought to work in capacity of PROJECT MANAGER and will be expected to have around 7 years' D.P. experience in any environment, but with a good business acumen. ANALYSTS will have slightly less experience. PROGRAMMERS with 2-5 years IBM OS COBOL experience will have opportunities to enhance their career.

NEW DEVELOPMENT OPPORTUNITIES

Ref. 2342

- ★ FREE LUNCHES
- ★ Contributory pension, free life assurance
- ★ NEW projects — NEW mainframe evaluation
- ★ Easy access either by road or rail

A RARE OPPORTUNITY! Due to rapid growth within major group services division, there are now various openings for career-minded D.P. persons. Retaining ICL 1900 equipment, Co. has recently evaluated new hardware, has large mini computer-based network and utilises TOTAL DBMS.

PROJECT LEADER: Successful candidate will have had 5 years' systems experience, a professional approach to project management and ability to communicate at all levels. He/she will have full responsibility and cover whole spectrum of project control.

PROGRAMMERS: Up to 5 years COBOL GII experience preferably using database. To assist in systems design, write program specs and lead programming teams. Prepare schedules and estimates.

NEW DEVELOPMENT OPPORTUNITIES

Specialists since 1971 in UK and International computer appointments. We have many other jobs on our files and offer a career counselling service to computer professionals.

PARIS - LONDON

Our clients are a Multinational company with corporate offices in Paris and an established company in London.

The following vacancies are available.

PARIS Analyst/Programmer

80,000 - 90,000
francs p.a.

We are looking for one, or possibly two experienced persons with a mini Real Time Systems background in commercial applications to work on new application projects. Candidates must be self motivated and able to work on their own. A basic knowledge of French, sufficient to read documentation and to communicate with the French teams is also required. Ref: 511/CW/RN.

LONDON Analyst/Programmer

£5,000 - £7,000 p.a.

The London vacancy could be filled by a less experienced person with a minimum of two years Real-Time mini programming. Ref: 512/CW/RN.

For all vacancies a knowledge of Hewlett Packard 3000 or PDP11 systems will be a distinct advantage as would previous experience on accounts or shipping applications.

For an informal discussion or to apply for any of the above vacancies, please ring Renée Nutt on (day) 01-242 9356 or (evenings and weekends) on 01-874 6372.

OCC Computer Personnel Limited, 16 Bedford Row, London WC1R 4EB

MINI COMPUTER MANAGER

Salary £8000 c. Plus car

A substantial marketing orientated company based in Essex is seeking a first class computer professional to develop, manage and implement substantial changes to its computing facilities.

The brief will involve choosing a new computer and creating a small team of specialists and to develop and implement new systems for the 1980s.

The right candidate (male/female) will need a creative and hard working mind. Please respond in writing to the Managing Director, H C Marshall, Nor Systems Limited, Valley Road, Harwich, Essex CO12 4RR.

Computer Operator

£3,900 - £4,300
(currently under review)

BICC, a major British group with over 100 sites both at home and abroad, are seeking a Computer Operator (male/female) for our Regional Computer Centre based at Wellington, near Croydon.

The centre, which provides a DP service to the Group's member companies is equipped with an ICL 2903 with data communications facilities operating on a 2 shift system.

Ideally candidates should have at least 12 months operating experience on a 1900 series installation but consideration will be given to people of lesser experience.

Conditions of employment are attractive and commensurate with a large multi-national company. Please telephone or write to:

Mr. D. Blinkhorn,
Regional Controller,
Kelvin House,
London Road,
Wellington,
Surrey SM6 7EH.

- * PREFERABLY IBM OS
- * COMMERCIAL APPLICATIONS
- * GOOD BASIC EDUCATION

Salaries will be commensurate with experience and FULL ACCOMMODATION will be provided during the first two years of employment.

Our client is renowned throughout the world for its products and is by far the market leader in a very specialised field. These vacancies offer U.K. personnel an exciting opportunity to enjoy the high standard of living in Amsterdam and be ideally situated for visiting other European countries.

REF. S1/3105/CW

ANY COMMERCIAL LANGUAGE

N.W. LONDON c £7500

Exciting opportunities have arisen in our clients installation for experienced Senior Analyst/Programmers and Analyst/Programmers to play a major role in the company's continued expansion plans.

The installation comprises a medium range IBM computer and RPGII will be used for all the new systems to be developed, many of which will be on-line. Ideal applicants will be able to offer a minimum two years' business experience having used ANY COMMERCIAL LANGUAGE and possess the potential to progress within an expanding organisation.

Successful candidates will be given formal training where necessary, after which they will join teams developing sophisticated systems ranging from warehousing and distribution to management information using the latest techniques and equipment. For more experienced applicants opportunities exist to lead projects.

In addition to the career progression available a range of company benefits make these exceptional opportunities.

SENIOR SOFTWARE DEVELOPMENT PROGRAMMERS

NEAR WINDSOR c £9000

Two first-class career opportunities have now arisen within the U.K. division of an American based computer manufacturer, currently extending and enhancing software for its very successful range of computers.

The people appointed will be given responsibility for the development of software in one of the major product groups and will work in small self-motivating teams utilising on-line programming and dedicated hardware facilities.

Applicants will need to demonstrate a sound assembler level mainframe or mini computer background, ideally combined with data management methods and operating systems experience and should possess a progressive and innovative approach to software development.

In line with the very competitive starting salary the company is able to offer a very pleasant working environment and all the usual benefits associated with a successful business operation.

NWL/3105

We're successful because our staff are

Data Logic operates at the forefront of computing, applying the very latest hardware and techniques to practical commercial problems. We cover the range from mainframes to the smallest computers. We are leaders in the use of microprocessors for applications that not so long ago required far larger machines.

Many of the systems we supply go far beyond providing extra speed and cost savings. They will revolutionise the way the user organisations operate. Several projects involve dispersed networks of ten or more minicomputers. Our largest turnkey system incorporates twenty-three machines and close to three hundred display terminals across the country — a totally new system which will serve almost every function within a leading company. A new police contract involves the first use in the UK of a mini for a complex data retrieval

application — with our own advanced methods for rapid, generalised record searches.

The exceptional scope and quality of work is important to our staff. We can match their individual experience to their projects. Equally, we can ensure that each project adds to their experience. As computing itself develops, so do they.

Over the past year Data Logic has grown dramatically in size, in scope of work and in reputation. Our expansion has meant unrivalled opportunities for career progression. We are not prepared to promote people before they are ready for it. But when they are ready — and we give all the assistance we can — the positions as senior programmer, senior analyst, project manager and consultant will be there waiting for them.

The reason is simple. We know that we are successful only if our staff are.

Senior Software Staff

(Ref PS/01) For mainframe, minicomputer and mixed processor systems, usually supporting terminal networks. Increasingly Data Logic's turnkey projects involve minicomputers at multiple sites.

Applicants must have at least five years experience including some work in consultancy, system design or team management. Substantial knowledge is required of either high level language implementation on a leading mainframe or assembler language development on DEC, Data General or other leading minicomputers. We are especially interested in experience of:

- database systems
- distributed systems
- data communications
- telemetry
- operating systems design and implementation.

Salaries will be highly competitive and a company car is provided to staff at senior team leader level or above.

There are vacancies at our Greenford, Birmingham and Manchester offices.

Programmers

(Ref PS/02) For both mainframe and minicomputer projects which include commercial applications, monitoring and control, and scientific analysis.

Applicants should have at least three years programming and/or analysis experience in high-level language or assembler on any leading mainframe or minicomputer.

This is an outstanding opportunity to gain experience in the development of complex high performance software. Our programmers work in small teams, taking considerable responsibility for distinct areas of the total system.

Salaries will be highly competitive. Vacancies exist at our Greenford, Birmingham and Manchester offices.

Write or call, quoting the appropriate reference number:

Data Logic

Open Day Central London 5th June
Words can only convey part of Data Logic's unique atmosphere. Meeting us will tell you far more. Come and discuss the opportunities we have for you at our open day at the Strand Palace Hotel, The Strand, WC2R 2AL on Thursday 5th June. We'll be there from 11.30 am to 5.30 pm. There will be drinks and light refreshments. And the sessions will be informal.

JBA

GERMANY

Operating Systems Specialists

£20,000 - £30,000

Several of our clients still seek operating systems expertise, preferably with a variety of machines via IBM, DEC, UNIVAC, CDC, etc. Work involves the design, program, test and installation of virtual machine operating systems and support software. The ability to design and implement software for an OS/MVS-type operating system is particularly desirable. Programming in assembler and high level operating systems languages. JBA would like to talk to anyone involved with operating systems, even post-graduates involved in research or similar.

Contact: Mike Creamer

Prestel/Viewdata Specialists

from £20,000

Immediate vacancies exist for consultants who have considerable experience of information transmission systems, such as Prestel, Viewdata, etc. Data communications expertise and database knowledge is vital to the positions, particularly where concerned with large mainframes and front-end processors. A user contact background is desirable. Our client is one of the largest consultancy organisations in the world with over 3,000 employees. On this solid foundation, the company offer real up-market remuneration packages and excellent relocation assistance. Further, the prospects of continuation of projects at very senior levels in a worldwide market place is virtually second to none.

Contact: Mike Creamer

Senior Systems Analyst

Hampshire

up to £8,400 + mortgage + benefits

This is a senior position combining project control and technical management of analysts and programmers engaged on vital work within a rapidly developing insurance company. With the installation of a database and TP system the position will offer tremendous opportunities for a senior analyst to diversify and expand technical experience. Applicants must be from a business COBOL applications environment, having preferably come up through the ranks to a leadership position, and be looking for a job with more responsibility and prospects. Immediate interviews will be arranged for suitable candidates. Tremendous employment and relocation package is offered, effectively increasing the base salary to a surprising level.

Contact: Mike Creamer

For further information on any of the above vacancies, please contact the appropriate consultant. If your qualifications do not match the above positions but you are seeking other opportunities please contact us anyway.

JAMES BAKER ASSOCIATES, International Personnel Consultants,
16 Maddox Street, London W.1 Tel: 01-491 4478

Communications & Control Systems

All Areas

c.£9,000

This client is fast building an unsurpassed reputation for the excellence of its technical ability and expertise in the development of advanced systems and software. They require a number of high-calibre technical staff to augment their team, in order to undertake the increasing volume of new orders for software development.

There is access to a wide range of mini and micro machines in-house, such as PDP11S, NOVA 3, HP1000, micro NOVA, INTEL and Z110C, providing an ideal "workshop" for those who enjoy a hands-on environment. Projects to be staffed full in to the following broad categories:-

- * Message and Line Switching
- * Data Communications
- * Command and Control
- * Automation

Ideal experience would be of Real-Time mini and micro environments and Assembler programming. Some knowledge of high level languages such as FORTRAN or CORAL is a distinct advantage. In general, however, drive, intelligence and adaptability are more important than specific machine technique or applications experience.

Contact: Margaret Stevens

Communications Programmers

Berkshire

up to £7,500

We have been requested by our client, part of a well-known computer manufacturer, to recruit several programmers to participate in the development of communications and network systems. Applicants must have several years experience in programming with the last two spent implementing software for systems where data is being transmitted over a network. Knowledge of the standard protocols and switching techniques would be an added advantage. Excellent salaries for the right experience.

Contact: Jim Baker

Systems Analyst

Lake District

c.£8,800

We have been retained by a chemical processing organisation, a leader in high technology, to recruit a Systems Analyst to work on the development of technical d.p. applications. Candidates should have a good degree, preferably in the sciences, followed by about five years in a computer development environment. Since the work includes program specification a background of programming would be an asset. Current projects include the collection and analysis of specialised data, mainframe and mini-computer systems. This is a positive opportunity to live in a delightful countryside and work on sophisticated applications. Excellent salary and benefits including relocation assistance and attractive allowances.

Contact: Jim Baker

We're looking for . . .

FALMER

Jeanius

Falmer Jeans is one of this country's most successful manufacturers of leisure wear, and as part of our continued programme of expansion we have the following vacancies in our newly-established computer department based in Rayleigh, Essex.

2 PROGRAMMER ANALYSTS

c.£5,000 p.a.

A Burroughs B1830 is currently being installed to handle all applications from Order Processing through Production Planning, Stock Control and Accounting. We now require two Programmers to design and implement the next phases of this development which will involve a considerable amount of liaison with user departments.

All systems will use the latest developments in on-line data base techniques using Cobol as the application language. Suitable experience in all these areas will naturally be an advantage.

COMPUTER OPERATOR/TRAINEE PROGRAMMER

c.£3,500 p.a. (No Shifts)

For this position we require a young person with the experience and technical ability to exploit the potential of a sophisticated on-line computer system. It is planned that full training on Burroughs hardware will be given, leading on to further courses covering Cobol programming and database techniques.

OPERATOR

Required for leading West London Auctioneers and Estate Agents based in W.12. Salary negotiable.

Please contact Willmott, 01-743 4444. Ref. TMHM for further details.

THE UNIVERSITY OF LEEDS
DEPARTMENT OF
CHEMICAL ENGINEERING

REAL-TIME DATA ACQUISITION AND CONTROL

Applications are invited from suitably qualified candidates for the temporary post of RESEARCH OFFICER in the above Department. The Department is committed to the continued development of computer based methods for real-time work in teaching and research as well as in the design and construction of the University. A good deal of the activities up to now have been on microcomputers using computing equipment from Data General, Digital Equipment and IBM but it is envisaged that microprocessor based systems will feature heavily in the planned expansion. The appointment will be made with effect from 1 October 1979 for a fixed period of three years.

Salary is an appropriate level on the scale for Research and Academic staff (E232-E27145) under review, according to high qualifications and experience.

Computer Shift Operator for ICL System 10

For Pershke Price Service Organisation Limited, sole U.K. agents for many of the leading German print and print origination equipment manufacturers, including some of the latest computer controlled separation and photo-composition systems.

You will be working on your own on a shift system that does not include night work, operating our ICL System 10 which is used for a variety of applications.

Salary up to national average, excellent benefits including subsidised canteen and sports and social club.

For an application form just contact the Personnel Manager, Pershke Price Service Organisation Limited, Dover House, 141 Morden Road, Mitcham, Surrey CR4 4XS. Tel. 01-848 7080.

Senior RJE Computer Operators

ICI are looking for two experienced RJE operators to work a two shift system in the busy computer terminal at Head Office.

The successful candidates will each be in charge of RJE operations on a large new CMC Sovereign System now being commissioned. This is an ideal opportunity for them to gain a detailed knowledge of equipment capable of communicating with a number of large IBM mainframe computers simultaneously and thereby enable them to become an integral part of a rapidly developing area of technology. It is essential that applicants should have relevant experience of operation

and transmission equipment and the ability to work under pressure in a service bureau environment. In exchange, we offer an excellent starting salary, shift disturbance allowance, profit sharing scheme, pension fund, recreation club facilities including squash courts, and a subsidised canteen.

For more information please apply to Miss Jane Mutton, Head Office Staff Section, ICI, IC House, Millbank, London SW1P 3JF or telephone 01-834 4444.

Open Day 1.5.79

Analyst Programmers

£22-28,000 pa

The Howard Organisation is expanding its European software activities, particularly in the European sector, and requires several analyst/programmers with at least one year's experience of Interdata 32 (under O.S./32MT) and not less than 5 years' general Real-Time mini experience.

Qualifications to degree level are necessary. Successful applicants will be required to work in Germany for approximately 2 years and will enjoy very attractive employment conditions.

Contact Geoff King at the address below quoting Ref. GWK 180479 for full details or telephone 01-963 4066 (office hrs) or Aylesbury 630606 17-9 pm. evening.

LONDON BOROUGH OF
Wandsworth

Internal Consultant

c£9,000

A major British manufacturing company achieving vigorous growth offers a practitioner, of the highest calibre, career entry solving business problems in the financial, marketing and production fields.

You must have achieved significant success in the practical application of O & M, Computer Design and/or Operational Research techniques either as a specialist or combined with other skills gained in fine management. This will be allied to an intellectual capacity measured in academic terms by a good degree, possibly augmented by post-graduate studies. Your numerical qualifications and project leader capability should indicate management potential. Excellent conditions, in a 'blue chip' company with headquarters in the South, include help with relocation.

Men and women are invited to write, in confidence, under ref: 1566/ALD/CW detailing age, qualifications and relevant experience to:-

**Robert Lee
International**
24 BERKELEY SQUARE, LONDON W1X 3AR

McDowell, Knaggs

COMPUTER RECRUITMENT, TRAINING AND CONSULTANCY
SCIENTIFIC, TECHNICAL & ENGINEERING DISCIPLINES
SALARY RANGE £4000 p.a. - £7500 p.a.

For installations in GLOUCESTERSHIRE, WORCESTERSHIRE and the W. MIDLANDS require staff for Computer Systems Design, Hardware Design and Modification, Modeling, Simulation, etc., on the following types of applications: Rocket propulsion, aircraft head up/head down displays, computer typesetting, circuit layout/diagram design and analysis, aircraft weapons systems, C.A.D., gas turbine engines, automatic test equipment, computer aided engineering digital control systems, airborne applications and micro-processor techniques.

Candidates should ideally have a numerate degree or equivalent, but the right attitude, personality and type of background is more important. They should in addition have the capability of solving technical problems involving design and programming, be self-motivating and have the desire to work in a challenging, informal environment as a member of a small compact project team on site of the art technology - including micros.

Language used include FORTRAN, BASIC and Assembler and the Hardware includes PDP, PRIME, GEC, D.G., ZILQ and T.I.

If you would like to work in any of these geographic locations and your qualifications and ambitions are suited to the above then phone Don Knaggs on Worcester 427077 (Monday 400036 evenings and weekends) or write to THE MOUNT, 1 ST. JOHN'S, WORCESTER.

OXFORD POLYTECHNIC

Computer Centre

PROGRAMMERS
(Salary £3732-£5073)

A number of new posts for Programmers have been created in the Computer Centre of Oxford Polytechnic.

At present the Centre's main computer is an ICL 1903T, running MAXIMOP and GEORGE 2, but a major new interactive system will shortly be ordered for delivery during Summer '79. The two most commonly used programming languages are FORTRAN and COBOL. There are, however, many students and staff wishing to use or experiment with all the newer high level languages. We are looking for both systems and applications Programmers to work in most of the 16 departments, and in support of the administration. If you feel capable of working in this demanding environment using your skills to help others, write for further details to:-

BUSINESS ANALYST**
10 years' experience in computer systems studies (industrial, commercial and financial systems), and implementation. Bilingual English/German. New graduate from VME, plus challenging new opportunities in V. Europe. Ref: 1071 Computer Weekly

Baric

Where your career develops as fast as your skills

Baric is already one of Britain's largest computer bureaux, providing a fast and efficient service to commerce and industry. Being jointly owned by ICL and Barclays Bank, we have the resources we need to make sure our current expansion plans are a continued success.

As an experienced Operator, male or female, you could have a major part to play in our future. At present we have two 1904S's and 1904A, a 1902T and a 2970, and in addition we are introducing exciting new developments like our DATACARE system of terminal based distributed processing.

Shift Leader

£5,000-£6,000 + 41% shift allowance

You will have had at least five years' experience of shift management gained ideally in a commercial multimachine environment. You should be completely familiar with GEORGE 3 and/or 2900 equipment under VMEB, and have experience of COMMS, and preferably of working with a bureau.

Senior Operators

£3,500-£4,400 + 41% shift allowance

You should have had at least two years' experience, including GEORGE 2, GEORGE 3, or VMEB. Familiarity with COMMS is essential.

Operators

£2,800-£3,700 + 41% shift allowance

If you are familiar with the operation of ICL equipment we can offer you excellent prospects and a real chance to develop your experience.

The excellent salaries are a substantially increased by the allowance which is currently under review payable for working our four-shift system, which allows us to give 24-hour, 7 days a week service.

Prospects within our growing organisation are excellent, and your career progression should be as rapid as the development of your skills.

To find out more contact Peter Strode, Baric Computing Services Limited, Forest Road, Faltham, Middlesex. 01-890 1414.

Internal Consultants

Computer Systems Audit/Security
London based, to £10,500 + car

These vacancies arise through promotions within a function recognised as providing excellent and varied prospects of career advancement. Our client is a multinational manufacturer and distributor of business equipment and supplies. Successful candidates will be members of an internal consultancy team providing international management at all levels with a professional appraisal of operations methods

and an assurance of the integrity of current systems. Candidates, probably 27-35, must be graduates with at least 3 years in EDP systems management, ideally with IBM equipment. A full understanding of business problems associated with large scale systems development is vital. For one of the vacancies experience of security technology is preferred. There is about 30% travel, mainly overseas.

N.P.S. Lilley, Ref: 22134/CW.

Male or female candidates should telephone in confidence for a Personal History Form to: LONDON: 01-734 6852, Sutherland House, 5/6 Argyll Street, W1E 6EZ.

Northampton Borough Council
Finance Department

Senior Systems Analyst

S01/2 - £6232-£8060 p.a.
(inclusive of supplement)

Applicants for this challenging and interesting post should have approximately 3 years' experience in Systems Analysis and be capable of undertaking new projects from beginning to end.

The Council operates an ICL 64K 1902T Computer with disc and tape backing, on-line video and cash recording terminals and key-edit magnetic tape input. The communications network is in process of expansion. Starting salary will be commensurate with qualifications and experience.

Temporary lodging or travelling expenses: disturbance allowance; assistance with removal expenses and estate agents' solicitors' fees in approved cases. Housing accommodation may be available.

Application forms are available from the Chief Executive and Town Clerk (Personnel), Northampton Borough Council, 81 Darnley, Northampton NN1 1UW. Telephone Northampton (0804) 34081, Ext. 593. Completed forms to be returned by not later than June 11th, 1979.

Success creates new opportunities in Sales & Service

Modcomp is one of Europe's leading suppliers of mini computer equipment, particularly in the industrial process control and communications field. Over the last eighteen months, we have doubled our installed client base, introduced new product lines and established manufacturing and software development in the U.K. We have ambitious plans for continuous growth over the next eighteen months and need the following key people to join us in achieving this.

European Service Manager

Extension of the European organisation and resultant internal reorganisation has created a requirement for a senior manager within our European Customer Service Division. This is a key position requiring a strong manager capable of establishing operating procedures and reporting mechanisms to run a multi-million pound field service organisation. This involves local field service, national support, depot repair and customer service acceptance activities across several European countries. The role will be working from a base but will involve some travel to Europe and our headquarters in Florida. Ideal candidates will probably already be experienced in running a field service organisation in a systems house or manufacturer of processors or peripherals. Essentially he/she must have the potential to grow with the organisation.

Sales Manager, Scandinavia

Modcomp intends to establish a direct sales operation in Sweden during 1979. We need a highly competent Sales Manager to be actively involved in setting up the new office and to spearhead the expansion of our existing sales market. This involves the support and development of existing OEM's as well as the identification of new OEM and major end-users throughout Sweden, Finland and Denmark. Essentially this individual will be a sound business person well able to demonstrate a successful track record of sales management in the mini computer market, particularly in Scandinavia. Fluency is required in Swedish as well as a good grasp of English and a willingness to relocate, if necessary, to the Stockholm area.

Service Manager, Scandinavia

Increased sales activity, increased client base, means we need a Customer Service Manager to work closely with the Sales Manager to ensure a successful operation in Scandinavia. Specifically he will be responsible for the development and organisation of all service (repair/repair) functions, both hardware and software. This will also involve determining terms of business for marketing service department activities, establishing reporting procedures and developing training programmes for clients and own staff. This individual must be capable of working on own initiative and currently will already hold a senior supervisory role in a field service environment. He/she will be familiar with processors, controllers (as peripherals, either mainframe or mini). Again fluency is required in Swedish and a working knowledge of English; also should be prepared to move to the Stockholm area.

Company benefits are excellent for all these roles including competitive salary and company car. For application form or further details contact ANNE CAMPBELL on 0734 786711 or send detailed resume to MODCOMP, MOLLY MILLARS LANE, WOKINGHAM, BERKSHIRE.

MODCOMP

Real-Time Mini + Micro

Our client, a major international Corporation, has openings in several of their U.K. and E.E.C. offices, including Central and Greater London, Hants, Cheshire, Holland, Denmark and Germany. In particular they are seeking Senior Analysts and Programmers, Project and Team Leaders and Systems Designers to work on projects including: Process Control, Communications, Military systems, Modelling, Simulation etc.

Ideally your hardware experience will embrace either PDP11, D.G., Interdata, Intel 8080, Zilog Z80 or M6800 and your languages include Assembler with either Coral 66, Pascal, Basic, Fortran etc.

Whilst a degree in Computer Science or equivalent would be advantageous, emphasis will be placed firmly on depth of experience and potential.

A full benefits package will be offered to complement a very attractive salary (overseas up to 60% higher) and many positions qualify for a car. Expect to negotiate around:

SUB-EDITOR

Electron, the weekly magazine for the UK electronics end electronics user industries requires a sub-editor.

We are looking for someone who can edit and layout copy at a fast pace.

Ideally, applicants will already have some journalistic experience on a technical publication. However those currently working in electronics who wish to break into publishing will be considered.

Salary up to £4,900 and £210 reading allowance.

Telephone or write to Berrie Nicholson, for an application form: Electron, 79/80 Blackfriars Road, London SE1 8HN. Tel: 261 9111.

SYSTEMS ANALYST c.£6,500

E. Gomme Limited, who manufacture G-Plan furniture, have a vacancy for a Systems Analyst in their IBM 370/125 installation.

Applicants should have several years' data processing experience, with at least 1 year spent in systems analysis, ideally in a manufacturing environment.

The successful applicant will play an important part in the design and implementation of a wide variety of new applications, both batch and T.P., as well as being involved in the development of existing systems.

Conditions of service are very good. Relocation expenses will be reimbursed where appropriate.

Please write to: Mr A. Sampson, Company Personnel Manager, E. Gomme Limited, Spring Gardens, High Wycombe, Bucks.
Tel: High Wycombe (0494) 28260

HERTFORDSHIRE COUNTY COUNCIL

This opportunity has arisen for Data Processing professionals to join our computer team currently involved in an ambitious programme of systems design and development. Candidates should be enthusiastic, imaginative, drive and ability to achieve objectives within prescribed time-scales.

The installation comprises a 1M byte NCR Citron 800 providing virtual storage under VAX operating system and interactive program development. Current developments include a major on-line stock control system and the transfer of mini-computers as part of a planned distributed processing network.

The posts to be filled are -

PROJECT LEADER

salary £7,164-£7,908 inclusive (ref: CP.4)

Applicants should have a sound knowledge of computer projects from feasibility study to implementation stage. At least one year's experience of leading a team of developers is required. Experience in project control and evidence of successful implementation of at least one major project essential for this key post.

SENIOR SYSTEMS ANALYST

salary £5,633-£7,350 inclusive (ref: CP.5)

Applicants should have at least three years' systems experience, preferably on commercial applications. A programming background would be considered to be advantageous.

CHIEF OPERATOR

salary £5,847-£8,180 inclusive (ref: CP.6)

In addition to the responsibility for the co-ordination and administration of the two shifts of operations staff, the role includes a rapidly developing technical support function for operations area. Applicants for this post should preferably have extensive operations experience of NCR main-frame computer and a general knowledge of telecommunications equipment, mini-computers and operations support activities. A self-motivated and an ability to learn new techniques are considered to be essential for this post.

Generous holidays, a contributory pension scheme with a wide range of benefits. Ideal working conditions, new offices, staff restaurant, in an attractive rural setting overlooking County Town of Hertford, a range of sporting facilities within easy reach of London's many amenities.

Removal, disturbance and lodging allowances are payable in approved circumstances and assistance with housing may be given.

Applications (no forms) giving details of experience, age, qualifications etc., to County Treasurer, County Hall, Hertford, quoting appropriate reference, by 11.00 am, 11 June.

Apply in writing to the

Personnel Manager,
Vernon's Organisation Ltd,
Ormeau Road,
Aintree,
Liverpool L68 1AA

When we call someone a manager it isn't just a title. We mean it.

Data Logic's Professional Services Division is one of the country's leading software groups. We advise on feasibility, develop software and supply total systems. We cover the range from mainframes to the smallest computers. Several of our projects involve dispersed networks of ten or more minicomputers. Our largest has twenty-three machines and nearly three hundred displays.

Our line managers are responsible, within their defined areas, for sales, for projects and for staff. When we say they are responsible, we mean it. There are sales and profits targets, software quality standards to be met, and project deadlines. There are clients who look to the manager and his teams as experts - often the experts - in their fields. And our

managers have considerable autonomy in planning and implementing the future development of their departments.

We want to meet men and women with the experience and ambition to join our successful management team. We know that there aren't many of you. You will have sales or management experience in a software or systems company. You will be technically on top of, and thoroughly up to date in, your field. You will have the confidence that you are ready to take on the demanding role we describe.

We are especially interested in knowledge of applications in banking, finance, commerce, industry and the public sector. There are opportunities in both the London area and the

North of England.

Rewards will be high, with salary well into five figures, a company car and other benefits. As to the future, we plan to more than double turnover in the next five years. So the prospects for our managers will be outstanding... perhaps even unrivalled by any other UK systems company.

INTERNATIONAL AMERICAN BANK COMPUTER AUDIT

We are a major American Bank, long established in London. Presently we are expanding our activities considerably Worldwide and particularly in Europe.

Large data processing projects are currently being developed and more are planned in London, Europe and the Far East. The equipment is mainly IBM 370 and IBM System 3/32/34.

As a result of this expansion, the International Audit Department wish to recruit a young man or woman, to join the Computer Audit team. The position will suit a self-motivated programmer, in their mid-twenties with at least 2 years' experience of COBOL Programming under DOS/VS (preferably in a banking environment), who wishes to develop their career by moving into the fast expanding field of Computer Auditing.

The post affords the opportunity of working with various Computer Systems, both in London and Overseas, and offers excellent training to keep the candidate at the forefront of Computer technology.

Generous fringe benefits include:

- ★ Low interest mortgage and personal loan facilities
- ★ Free lunches, BUPA contribution and life assurance
- ★ Interest-free season ticket loan
- ★ Profit sharing
- ★ Non-contributory pension scheme

In Engineering the future belongs to Computer Aided Design

A CAD Ginosul representation of a Welsh mountain range.

A CAD Ginosul representation of a gas turbine.

Software Sales Consultant to take Gino into the 1980's

c.£8000. Cambridge based

Graphics, Engineering Databases, Language Processing

Industry's interest in the application of computers to design and manufacture is growing. It is the task of the Computer Aided Design Centre to help our customers make better use of their resources.

It is no exaggeration to say that a revolution is taking place in this field - and you could help to shape it.

The Centre is staffed by some of Britain's leading practitioners in the development of advanced engineering software. To match this we have created a Sales Consultancy group and now wish to appoint a Software Sales

Consultant to cover established graphics packages based on our successful GINO family, together with engineering database and language processing software.

Your understanding of highly interactive computing processes will be complemented with 2-3 years' selling plus ideally contract negotiation experience - perhaps with a manufacturer of graphical equipment or a specialist software house.

You will work with our Profit Centre Managers and support staff, but will spend much of your time away from the Centre, primarily in the UK and Europe, and will control and monitor agents worldwide.

The ability to write and present clearly argued proposals, often to very senior customer management, is naturally essential.

The Centre, in pleasant rural surroundings on the outskirts of Cambridge, combines all the advantages of a small organisation with the benefits of a large company. Our competitive salary and benefits package includes participating in our 1979 Productivity Bonus Scheme and assistance with relocation where appropriate. Talk it over with our Marketing Manager, Norman Sandland, on Cambridge (0223) 63125, or write with career details, quoting reference CW1386, to Richard O'Shea, Computer Aided Design Centre, Madingley Road, Cambridge CB3 0HB.

London SW1E 6QS.

PROGRAMMERS

Henley-on-Thames

c. £5,000

Spring Grove Services, a leading company in the permanent rental business, requires Programmers to work on new developments in the company's systems. Our present systems run under GEORGE 2 on an OCL 1903T, with a subsidiary company in Holland using an IBM System 32. The market is changing rapidly and our systems must change to remain competitive. To this end we are investigating the use of micro-computers and micro-soft, and the techniques of distributed processing. We need Programmers who can come up with good ideas as well as good software. Two years' COBOL experience is essential and a knowledge of RPG2, ICL 1900 or IBM System 32 machines would be an advantage. The successful applicants will join a highly skilled team based in Henley. There will be opportunities to travel to our processing plants throughout the U.K. There are attractive company benefits including free insurance and a generous contributory pension scheme. For further details and application form contact:

Wendy Howley,

Specialists since 1971 in UK and International computer appointments. We have many other jobs on our files and offer a career counselling service to computer professionals.

sems

Our clients "Société Européenne de Mini-Informatique et de Systèmes" is expanding its operation to the UK market. A member of THOMSON-CSF, one of the world's leaders in electronics, SEMS is currently marketing worldwide a range of MINI Computers including the SOLAR and the MITRA series, offering a wide-ranging involvement in the industrial, scientific and also business systems markets.

SALES EXECUTIVE (Manager Designate)

c. £15,000 + Car.

The first key position of a new sales force is to be offered to a Sales Executive who will assume immediate responsibility for the UK market. This candidate could become the future Manager of a growing UK network.

This position calls for a strong track record in computer sales, preferably in an environment similar to SEMS established market i.e. Industrial and scientific mini computer systems. A second line of activity will be entering the interactive market with SEMS recently introduced SIS systems. Experience in that field would therefore be of additional interest.

The ideal candidate could be one of the following:

- An established Sales Executive with impeccable sales record, who will want to continue working in a similar role assuming a star position in an expanding sales force.
- Someone who can offer the same sort of experience but has the ambition and the potential to move into Sales Management.
- A Sales Manager who can offer experience in Sales Management as well as a competent sales record and is prepared to work initially as a Sales Executive.

Product training on SEMS products will be given. The company will be based in Feltham. Full conditions of employment will be offered including some relocation expenses if applicable. The package negotiated for the first year will be on a full salary basis incorporating the amount of commission a top Sales Executive would expect to earn. Ref: 510/CW/Renée Nute.

Clients interviews will start in London w.e.f. Saturday 9th June. Final interviews will take place soon after in Paris.

Please ring Renée Nute on 01-242 9356 or write to the address quoted. If it would be more convenient to telephone in the evening or during the weekend please ring 01-874 6372.

Reed Executive is open to both male and female candidates.

Programmer/Analysts

ANALYST PROGRAMMER

C £8,500 **S.E.1**
Feel like travelling worldwide? A major business forms manufacturer with international associate companies requires an alert RPGII programmer to help install exciting new systems on an IBM System 34 computer. Applications you will work on include sales and marketing, stock control, order processing, fixed assets and financial systems. Candidates should have at least 2 years' computing experience and be prepared to travel. There could also eventually be the chance to learn the latest RPGIII language. Large company benefits apply and there are excellent prospects for promotion.
CW 22/9 MICHAEL

CONSULTANTS

C £7,000 + PROFIT SHARING + CAR **C. LONDON**
A small but active software house based in SW London needs 3 systems analysts for the following major applications. The first analyst needs to have ICL 2903/4 or 1900 GII experience of 4 years or more, to work on a major financial application. The second needs to know the 2960 machine as this involves an interesting MIS conversion and upgrade from an existing ICL 1900. The third consultant should have stock or production control experience for an ICL 2900 under VMBS, using TP and IDMS. All three vacancies offer attractive working conditions including 4 weeks' holidays and 9 months' sick pay.
CW 22/2 MICHAEL

PROGRAMMER/ANALYST

C £8,000 **CROYDON**
Our clients are an international foreign insurance company with the majority of their systems being financially oriented. IBM COBOL people should apply and especially those who would like the opportunity to learn MKIV. Although the installation is not large the work is very varied and interesting, and demands a high degree of professionalism. Excellent shopping area nearby and the usual large company perks.
CW 22/3 MICHAEL

ANALYST PROGRAMMER

TO £8,500 **S.E.1**
Being a Specialist Service Bureau our client's future is assured, so why not join them and make sure your future is as safe? They specialise in legal work and provide on line and batch facilities from their up-to-date OEC installation. If you have 2 years' BASIC+ experience and enjoy working for a progressive organisation then apply now. Company benefits include C.P.S., Life Assurance and 4 weeks' holidays.
CW 22/4 MICHAEL

CUSTOMER SYSTEMS SUPPORT

C £9,500 + CAR **C. LONDON**
This major international terminal and mint manufacturer requires three first-rate Systems Analysts to advise, design and install a variety of Real Time applications based around Mini or O.E.M. Mainframe Computers. Excellent opportunity for advancement and top company perks.
CW 22/5 MICHAEL

SYSTEM 10 PROGRAMMER

£4,800 to £8,300 + O/T **SLOUGH**
Do you have System 10 experience and wish to use it, but also wish to broaden your knowledge to include IBM equipment? If so then apply to join our client's company, an important distributor of industrial appliances. They have a major IBM OS/VS installation plus a connected network of System 10s around the country for on-line distributed processing work. Excellent company perks include paid overtime, relocation expenses, flexitime, non-C.P.S., subsidised canteen and 4 weeks' holidays. You really can't afford to miss this golden opportunity.
CW 22/8 MICHAEL

ANALYST PROGRAMMER

£4,500 to £8,000 **NR. HEATHROW AIRPORT**
Are you a COBOL or PLI programmer with about 2 years' experience, anxious to get into analysis work but frustrated? Apply to this major consumer product company and they will train you accordingly and make your career really worthwhile. They have an IBM OS/VS installation using on-line CICS systems and work will be on a number of sophisticated commercial systems. Top company perks include 4 weeks' holidays, subsidised canteen, annual bonus scheme and a free local bus service.
CW 22/7 MICHAEL

PROJECT LEADER

TO £8,500 **NR. SEAFORD**
With a lovely area to live in, pay and working conditions at the top end of the bracket, this surely must be the right move for you. You just need 5 years or more O/P experience as an analyst or programmer based around IBM equipment (using COBOL or PLI) with a preferred O&M background. You should also have the ability to lead a small team working on advanced IBM OS/VS1 CICS systems. Top perks include relocation expenses, flexitime, C.P.S., subsidised canteen and 4 weeks' holidays. Project leader type please apply now.
CW 22/8 MICHAEL

PROGRAMMER/ANALYST

£8,500 to £12,000 **CENTRAL LONDON**
Six large, well-established consultancies wish to recruit systems people with all-round experience on third generation equipment and the right personality to deal with clients who require first-rate service. Technical Communications Consultants are also required where in-depth implementation experience of IBM or OEC latest ranges are essential. Excellent fringe benefits and prospects.
CW 22/1 MICHAEL

ANALYST PROGRAMMER

C £8,000 **ESSEX**
A major industrial office product organisation is looking for programmers who wish to progress into analysis, or analyst programmers with 1½ years' IBM COBOL experience. This company has exciting application areas to work on, including a major accounting and order processing system where teleprocessing and Database techniques will be used on their IBM OS/VS installation, which include 70 VOLUMES. Excellent training, nice new building and company benefits will be provided. Please apply quickly.

MICRO PROCESSING

Germany

Up to £17,500 + benefit

Opportunities have arisen with our client to combine a move to Germany and work on a micro-processing development.

Candidates with experience of INTEL 8080 or similar will enjoy a rewarding career developing micro systems for test and installation equipment. Experience of PLM would be advantageous.

Successful candidates must have the ability to speak standard German. Our client offers generous salaries plus many fringe benefits.

CW 22/1

MAINFRAME COBOL

London

£7,000 + bonus

Experience of COBOL is the more immediate requirement needed by our client, an international software house, today.

Fortunately, our client being one of the oldest and most respected companies in the industry can and do offer a lot more than the majority of their competitors. These benefits range from genuine career progression to Project responsibility. Salaries + Bonuses are related to one's contribution to the company, and there is the prospect of interesting assignments in the U.K. and overseas.

As mentioned above, we seek candidates with COBOL experience, but due to the overall business base being spread over all the traditional mainframes our client can and will offer interesting and well paid (up to £7,000 + bonus p.a.) job opportunities to programmers with 2 years or more COBOL on any machine.

Up to £7,500 + car

One of the most dynamic companies marketing computer equipment today, is recruiting two additional support consultants to introduce new product lines. These products are centred around word processing and portable DATA ENTRY equipment.

Candidates should have an academic qualification in a computer-related subject. Suitable backgrounds will include experience in both hardware and software in a support, service or design environment.

These positions include pre- and post-sales support for these new product lines and include the evaluation and introduction of the products to the worldwide network of distributors.

The Company offer one of the most rewarding career opportunities with in a dedicated and committed marketing and support operation in the UK and Europe.

CW 22/2

HONEYWELL

N.W.3

c £6,000

Our clients, a National Transport organisation who have their Head Office in Swiss Cottage, have a vacancy for a JUNIOR ANALYST or PROGRAMMER who would like to move over to Analysis.

Their installation is a Honeywell 66/40 running under GCOS and using TDS/IDS. The successful candidate will initially train and gain experience by working with a Contract Analyst, but you will eventually be providing the base of future analytical requirements. It is envisaged that the person selected will eventually become the Senior Analyst.

Ideally, the person we are looking for will be of Degree standard, would either have had programming experience (Cobol on Honeywell Hardware) and some analysis, or a Programmer/Analyst who wishes to become a full-time Analyst.

CW 22/4

SYSTEMS AND PROGRAMMING

London

Up to £8,500 p.a.

A major international service company based in LONDON has a need for experienced PROGRAMMING AND SYSTEM staff to assist them with their planned expansion:—

The installation is an IBM 370/15B running under MVS, and using CICS and IDMS.

Their main requirements are for SYSTEMS ANALYSTS with at least 2 years' Systems Design experience in any of the following areas:—

TELEPROCESSING, REAL-TIME SYSTEMS, DATABASE

They also have vacancies for PROGRAMMERS at all levels, the minimum requirement being two years' experience of programming in PL1 and/or Assembler on IBM equipment, within a project team environment.

In addition to earning attractive salaries, the successful applicants will be offered all the benefits usually associated with a large company.

CW 22/8

MOVE INTO MICROS

Berkshire

A small systems company based in Bracknell, is in the process of expanding its operation and consequently is able to offer unique opportunities to enter the microprocessing side of computing.

The company now requires graduates with a good all-round knowledge of programming and systems design, and experience of FORTRAN and/or an assembly-level language to assist them with their development of specialised systems for the graphic arts industry and the legal profession, which are based on Data General hardware. They would also like to hear from Engineering graduates who have experience in logic and systems design, with a knowledge of systems debugging using assembler.

Successful applicants will be offered an above average salary as well as the opportunity of working on stimulating projects for a dynamic young company, where results are well rewarded.

CW 22/8

ADVANCED TECHNOLOGY SOFTWARE DESIGN

★ DESIGNERS ★

SENIOR DESIGNERS

★

PROJECT LEADERS

£6,500 P.A. TO £9,000 P.A.

One of the World leaders in the field of Telecommunications can offer experienced Software designers the opportunity of joining teams working on the most advanced Telecommunications system in the industry. At Project Leader level candidates will be able to make an immediate contribution based on 4-5 years' solid experience in Control Software and preferably a knowledge of Telecommunications systems. There are, however, opportunities at all levels and if you have any experience of real-time Software Design or High Level languages we strongly recommend that you contact us to discuss these openings.

The teams will be based WEST of LONDON in RURAL BERKSHIRE. The working environment at the Self-contained Research and Development centre is exceptionally good, and there is a very generous RELOCATION PACKAGE available to all candidates together with the usual large company benefits.

CURRENT PROJECTS

- ★ OPERATING SYSTEMS
- ★ COMPILERS
- ★ SIMULATION
- ★ TELECOMMUNICATIONS SOFTWARE

CORAL is the main software tool but FORTRAN, ALGOL or ASSEMBLER experience is useful.

CAREER PACKAGE

★ REMUNERATION — These salary levels are realistic and negotiable on experience and potential.

★ PROSPECTS — The pace of development is such that having proved your ability, the positions of responsibility will find YOU.

★ EXPERIENCE — Quite simply, involvement in this nationwide project will put you at the head of your field.

★ TRAINING — In depth, on end off the job.

Computer Services & Recruitment Consultants

01-603 7335

Specialists since 1971 in UK and International computer appointments. We have many other jobs on our files and offer a career counselling service to computer professionals.

SURREY EUROPE

RAND
INFORMATION
SYSTEMS LTD.

Our clients offer data processing services to clients throughout the world. Their corporate offices are in San Francisco with established companies in the UK, France, Israel and Australia. For over 10 years they have consolidated their reputation as specialists in conversion systems; they are also entering other areas in the computer market and wish to recruit a number of computer professionals to meet their expansion plans.

Cobol Programmers
£4,500 - £7,000

Technical Consultants
£7,000 - £9,000

We are looking for high calibre Programmers and Technical Consultants with a minimum of two years solid COBOL programming experience on Honeywell, IBM and/or UNIVAC systems.

More experienced candidates should offer a sound working knowledge of OPERATING SYSTEMS (GCOS for HONEYWELL), TRANSACTION PROCESSING, DATABASE (especially for Univac 1100), or a specialist knowledge of IBM.

All positions are permanently based in the UK with overseas assignments offering an opportunity to travel or to work abroad in the case of longer projects. Current projects are in progress in the UK and FRANCE with prospects in HOLLAND and GERMANY.

Competitive starting salaries will be negotiated within the range £4,500 - £9,000, taking into account qualifications and experience. The package will also offer generous fringe benefits. *Ref: 514/CW/RN.*

(Et si en plus de cela, vous parlez français, et bien raison de plus pour ne pas hésiter!)

Please ring Renée Nute for further information - day 01-242 9356, evenings and weekends 01-874 6372.

Our offices will be open until 7.30 p.m. on the 4th and 5th June for informal discussions with our clients representatives and our consultants.

PROGRAMMERS HAMMERSMITH AND NOTTING HILL GATE

A major International Group of Civil Engineering Consultants and Architects have two vacancies for experienced Programmers, one in their Hammersmith office and one in their Notting Hill Gate office.

Duties will include assistance in running Prime 300 and computers, assistance to users and responsibility for maintenance of the computer hardware. The persons appointed will design, write, document and prepare Fortran programs to engineering problems: at Notting Hill Gate there will be other scientific and commercial programs.

Candidates must have a degree in engineering, science or mathematics or a HND in computer studies. A thorough knowledge of Fortran is essential and applicants should have a minimum of two years' computing experience, ideally as an engineering or scientific environment, over and above the experience acquired at University or College.

The salary will be related to the qualifications and experience of the selected candidate. Additional benefits include non-contributory pension and group PPP schemes. Flexible working: 20 days' annual holiday.

Please apply in writing, quoting ref: 1787 and enclosing a brief but comprehensive C.V. to:

SOFTWARE ENGINEERS

Do you have two to three years' experience programming microprocessors or minicomputers et assembly level? If so there is an opening for you in our active, expanding Research and Development Department.

We currently have vacancies for two Software Engineers to work on microprocessor-based designs and take responsibility for their software development.

The Department is active in a variety of fields including Research, Electronics, Computing and Precision Engineering giving the successful applicants the opportunity to develop their skills solving a wide variety of problems.

Applicants should hold a suitable degree or other equivalent qualification, and have worked with at least two of the following systems: PDP11/LS11, RT11, RSX11, IAS, M8800, 2801, 8080. An understanding of computer hardware would be a distinct advantage.

The Department is currently based in London, EC1, but will be able to offer the opportunity to work to the west of London in the near future. An excellent benefits package is offered, including a non-contributory pension scheme, free life assurance, staff restaurant, and relocation assistance.

The appointments would be financially attractive to those currently earning around £5.5k.

Please write to: M. H. Bormann, 2 Charterhouse Street, London, EC1; for an application form, giving brief details of your career, and a telephone number where you can be contacted.

I'd like to hear from
ambitious Field Service Engineers
from companies like
Burroughs, Honeywell, DEC
and Univac.

I've a challenge
you'll find hard to resist

I have been retained by a major computer company to interview Field Service Engineers who want to improve their career prospects.

For this reason I would especially like to talk to people who feel that their capabilities aren't being stretched to the full in their current job.

The company I represent is among the fastest growing computer companies with a multi-million pound investment in facilities, equipment and people throughout the world.

They have a wide range of interesting and advanced systems that are being used in business, science and industrial applications. Because of the company's continued growth in all these areas they need experienced Field Service Engineers for locations in the UK, particularly in the London area. Those who can prove themselves can expect promotion very quickly.

Don't worry if you feel your present experience is too limited. The company is making a major investment in a new training centre to be located in the UK. Here Field Engineers will be continually updated on their product range and Field Engineers joining this company will receive special training.

I can provide men or women a more interesting and worthwhile career plus an excellent salary package. All enquiries will be dealt with in the strictest confidence and your name will not be passed to our client without your permission.

Interviews will be held in London and you are asked to phone Mike Chapman at the address below:

South-East Thames Regional Health Authority

REGIONAL COMPUTER CENTRE

Project Leader

SCALE 14 — (£5,891-£7,069)

We are looking for a systems analyst to take responsibility for the financial systems project team. This challenging post will provide experience in supplies, accounting and estate management systems run on an ICL 1904S. Regional implementation of the supplies system is planned and Radfon equipment is to be used to link the supplies departments to the Regional Computer Centre.

We provide computer services for hospitals and Health Authorities in South East England. The Centre employs about 150 staff and the mainframe computer is an ICL 1904S with discs, tapes, printers, communications processor and MOP terminals. In addition, there are ICL 2904 computers dedicated to remote transaction processing sites at a Health District and an Area Health Authority, both linked to the mainframe.

We are also currently investigating the use of micro-processors for distributed processing applications within the Region.

The Centre is situated in the grounds of Lambeth Hospital, close to the Elephant and Castle. It is accessible by public transport and free car parking facilities are available.

For further information and an application form returnable within two weeks of the advertisement appearing, telephone or write to: The Regional Computer Services Officer, South East Thames Regional Health Authority, Regional Computer Centre, Brook Drive, London SE11 4TH. Telephone: 01-735 0071, ext. 38.

Project Leader

Salary up to £6702

To lead teams of programmers/systems analysts on full range of Council's computer activities. Candidates must be experienced COBOL programmers with up to two years' systems analyst experience. Job description available.

Systems Analyst/Programmer

Salary up to £5568

To work in project team initially on police command and control systems using dual specialist equipment backed by main frame, developing and maintaining communication and general systems employing CORAL and COBOL. The post will allow contact with specialised techniques and the occupant will be able to widen experience to the limits of ability.

The Council's computer equipment consists of a Honeywell level 66/10 and level 6 processors.

Application forms and further details for the above posts are available from the Personnel Officer at County Hall, Bedford. Telephone: 0234 63222 Ext. 107, to whom applications should be returned by: June 15th, 1979.

Bedfordshire

COUNTY COUNCIL

PROJECT LEADER

(Salary up to £7,230 p.a. inclusive of supplement)

SENIOR DEVELOPMENT OFFICER

(Salary up to £8,080 p.a. inclusive of supplement)

The City Council plans to install a 2 1/2 megabyte ICL 2960 Computer in October 1979 to replace an ICL 1904S Computer running under George III. An ambitious conversion and development programme of work is planned with an emphasis on communication and data management software.

Applicants for the position of Project Leader should have at least two years' relevant data processing experience, two of which should have been in a senior systems capacity, and for the position of Senior Development Officer, a minimum of three years' relevant data processing experience.

A salary award is expected to be applied from 1st July 1979 and the City Council offers an attractive relocation package which includes 100% removal expenses, reimbursement of legal fees, temporary lodging allowance, furniture storage expenses, incidental expenses and mortgage facilities in appropriate circumstances.

Application forms are available from the City Treasurer, Civic Centre, Newcastle-upon-Tyne NE8 1RD, and should be returned by 15th June, 1979.

For further details ring Mr. A. Maughan on Newcastle 28520, extension 310.

City of Newcastle upon Tyne

PROGRAMMER FOR NIGERIA

A proven programmer, preferably with a banking background, is required for service in our associate company in Nigeria. Experience in ICL COBOL/PLAN and ICL 2900 Series Equipment essential.

Position in a small development team offers considerable challenge involving wide all round responsibilities. Plans include use of package developed in UK to transfer accounting to a 2904 machine.

Emoluments in Nigeria will be not less than N16500 per annum (approx. £13,000 per annum at current rate of exchange). Fringe benefits include free furnished quarters in Nigeria, non-contributory pension scheme (subject to satisfactory medical), local Nigeria medical scheme etc. The assignment will be for up to 2 years initially during which period there will be generous home leave with passages paid. Thereafter term may be extended by mutual agreement, or successful applicant will be offered a position within our Computer Services Department in Poole or elsewhere overseas.

If interested, please write giving full details of career to date to:

Colin Maloney, Head of Development, Management Services Division, Barclays Bank International Limited, 1 Wimbome Road, Poole, Dorset BH15 2BB.

BARCLAYS International

ANALYSTS & PROGRAMMERS

The Southern branch of our parent company, GOULD COMPUTER SYSTEMS, currently need all grades of systems personnel, for work in the software house environment.

We have clients in all areas of the South of England, from Luton to Brighton and London to Bristol.

The sort of people we are looking for will be responsible professionals, who want to be a part of a small, rapidly-growing company, and able to contribute to its success.

Salary range £4500-£7000 + expenses, and car option after 2 years.

Or if you are a Freelance, with a professional attitude, or contemplating freelance work, give us a ring — It can only be to your advantage.

ICI Central Toxicology Laboratory

This laboratory provides advisory and experimental services to ICI Limited, to the control of toxic hazards in manufacturing processes and in other fields of growing importance, such as the development of pesticides and food additives. Emphasis is placed on improving and assessing methods for studying the biological effect of foreign compounds and upon understanding mechanisms of toxicity. The provision of toxicological information, prior to product clearance and registration in many countries, is a major activity undertaken by the Laboratory on behalf of the ICI Group.

Operations Controller Computer Services Group

The Central Toxicology Laboratory is introducing a data handling scheme to store and analyse the data generated by the toxicity tests it carries out for Divisions. The Job Holder will be responsible for the correct, secure operation of the system which is based on a Qala General M600 mini-computer. This will include the supervision of other operating staff. He/she will also be involved in the development of the operations environment of the new system and in the use of computer hardware throughout the Laboratory.

Candidates should have an engineering (or computer science or similar) degree (or equivalent), and/or previous working experience in a mini-computer environment with on-line systems. Supervisory and administrative experience and the ability to take decisions on system operating parameters quickly and clearly would be desirable.

You would be working two miles south of the village of Alderley Edge on the main road (A34) between Manchester and the Potteries on a 300 acre site which the Laboratory shares with ICI's Pharmaceuticals Division. Alderley Edge is less than 20 miles from Manchester and in addition to the well-wooded Cheshire countryside which surrounds it, Alderley is within easy reach of the Derbyshire Peak District, the Lake District and the North Wales Coast. Staff working at Alderley live over a wide area but mainly in the Macclesfield and Alderley Edge/Wilmslow area.

The salary for this vacancy is around £4400 plus a productivity bonus and there is a Profit Sharing Scheme. A contributory Pension Scheme is in operation and after joining, staff receive a reasonable refund of removal expenses.

Applicants, male and female, should telephone or write for an Application form to: Mr. Andrew Blain, Assistant Personnel Officer, Central Toxicology Laboratory, Imperial Chemical Industries Limited, Alderley Park, Nr. Macclesfield, Cheshire SK10 4TJ. Telephone: Alderley Edge (0625) 582741. Please quote Ref. No. OC/SS/JM. Closing date for applications: June 30th. Overseas candidates should only apply if they have a planned visit to the UK within the next two months.

ICI

OPERATIONS SERVICES OPERATOR.

OPERATING EXPERIENCE ESSENTIAL.

You probably started the hard way, at the bottom. Are you still stuck there after one or two years? You could be working for a company that's rapidly getting to the top.

Right now Comshare is moving faster than any other specialist services agency in Europe.

YOUR SECOND OR THIRD JOB?

We are not looking for a job hopper, but someone with a full knowledge of computer basics. You will be working in a fast thinking environment and need a more than average understanding of operating skills.

CARRY YOUR WEIGHT.

By now you'll realise we need someone a bit special who needs to realise his potential.

Your duties will be to augment Comshare's operators by being responsible for the vast array of non-standard mag tape operations, graph plotting, card and paper tape operations and if that doesn't keep you busy there will also be administrative duties to perform.

THE PRIZE FOR HARD WORK AND INITIATIVE.

The starting salary will be in the range of £4,250 to £4,500 per annum plus L.V.'s and B.U.P.A. But for the right person there will be the facility to progress without having to change jobs again.

Write to Vince Blackall at Comshare Limited, P.O. Box 197, London SW3 5RL. Or phone him on 01-351 4359.

COMSHARE

Making the computer make sense.

SAUDI ARABIA

Our client, the Ministry of P.T.T. Riyadh, urgently requires following personnel for IBM 3031 computers:

- **SYSTEMS ANALYSTS £27K P.A.** Min 5 yrs. exp. in computer systems work
- **COMPUTER OPERATORS £20K P.A.** Min 3 yrs. exp. as Computer Operator
- **UNIT SUPERVISORS £20K P.A.** Min 3 yrs. exp. in data processing to include one of the following fields:
 - (a) Scheduling on I/O control
 - (b) Job set up or production control
 - (c) Operation, programming and interface.

Above salaries are maximum depending on experience and qualifications.

Please ring 01-801 4321, Smith-Nasham, Overseas Personnel Ltd, 6 Walton Road, London N16 4PP

SYSTEMS DESIGNERS LIMITED

Quality first

We are confident of a successful and exciting future. ARE YOU?

Systems Designers Limited needs computer professionals at all levels to work in very nearly every field of computer operation, not only in the UK but also in Europe, the Middle East and the USA. Although a large amount of work is centred around our Camberley, Farnley and Manchester offices there are many long term projects which offer opportunities to see other countries throughout this world.

Our continuing requirement is for staff at all levels. We are looking for final year graduates as well as experienced software and systems professionals. Salaries are negotiable up to £12,000 p.a. according to ability and experience.

Systems Designers controls and encourages the career progression of its staff giving them a wide variety of experience of both project applications and computer systems.

The company runs a productivity bonus, insurance and pension scheme and offers assistance with relocation.

Telephon Ann Gregory for an application form and further information about the company or write to: Bill Hockley, Operations Director, Systems Designers Limited 1 Pembroke Broadway, Camberley, Surrey GU15 3XH Telephone Camberley (0278) 82244

Systems Designers Limited has an unrivalled reputation in modern computer technology as applied to mini and micro computers in real-time environments. This reputation is resulting in a company-wide expansion plan, which offers plenty of opportunity to the right people. We are British, independent, currently 200 strong and confident of a successful, exciting future.

Our principal work areas are currently:

COMMUNICATIONS: Message switching, telex systems, Communications management systems, computer communications.

INDUSTRIAL: Process control and monitoring, plant control simulation, high speed data analysis, distributed microprocessor system.

MILITARY: Modelling, avionics and radar systems, complex rigs, simulators, microprocessor missile systems.

SOFTWARE PRODUCTS: Compiler technology, software design techniques, MASCO, information processing systems, STATUS and VIEWDATA systems.

CONSULTANCY: Complex military systems, software and systems development technology.

TECHNICAL SUPPORT PROFESSIONALS...

DISCOVER HOW TO REVIVE YOUR ZEST FOR LIVING AND YOUR CAREER...

Who gets all the credit in computers? Just about everyone but the boys (and girls) in the backroom. It's all too easy to ignore the technical support role, yet the major and rapid advances in computer technology now make it an integral, vital, and profit making part of the sales operation.

Our client — a major name in commercial computing and one of the most exciting companies in its field recognises the role of the Support Professional for the important contribution it makes to its business.

Their success is second to none and they have bold plans for the future. In the next few years they plan to develop their service, their creativity and their share of the market to become unassailable leaders in their field. Now they are looking for more of the talent that will take them there.

Their immediate need is for more support staff to join both new and existing teams providing support to the many services offered. For the more experienced applicant there are real management roles requiring confidence and initiative. All successful applicants can expect a challenging and changing environment.

Your career will be developed with both formal and informal training and by interchange within the department. In addition real opportunities are present within the organisation as a whole.

You will work in a team developing or supporting one of the services offered which include G3 and VME/B with the emphasis of telecommunications. Further services are planned for the immediate future to meet the organisations aim to be at the forefront of technology. Salary will reflect experience but will not be less than £5,000 p.a., with exceptional candidates earning up to £9,000 p.a.

Ideally you should have experience in one of the following areas:

- Senior operations on a large ICL system
- Support of a large comms network
- PLAN programming
- VME/B or G3 support
- JCL or SCL writing

Give your career a new lease of life by telephoning Steve Gardner between 9.30 pm & 7.00 pm, quoting ref: 553, on 01-836 1385 at Moxon Dolphin & Kerby Ltd., 60 St. Martin's Lane, London WC2N 4JB.

MOXON DOLPHIN & KERBY LTD

People always ignore us in technical support... why get wound up about it?

An exceptional opportunity in computer systems training

Data Logic's Terminal Systems Division is one of Europe's leading suppliers of intelligent terminals and distributed processing systems. Our users come from government, industry and commerce. We are engaged in an ambitious expansion programme aimed at more than doubling turnover in the next five years. This will create extremely attractive prospects for career progression.

We require a Training Officer to take responsibility for both customer and internal staff training. He or she will plan and prepare courses on the Division's hardware and software products. The courses will be given in-house and at customer sites throughout the country. The Training Officer will also control demonstration areas and systems at our new headquarters in Central London, now being equipped to the very highest standards.

Apply your Computing Knowledge to Business Planning

Unilever have an opportunity for an assistant, experienced in computer data control, to join a small team located at their Blackfriars Head Office, involved with developing and operating mathematical models for Business Planning. The assistant would, after training, assume responsibility for the operation of a group of existing models, and assist in the development of new models or the adaptation of existing ones.

Suitable applicants should have 'C' and preferably 'A' level mathematics, be experienced in computer operations, and be able to demonstrate the qualities necessary to cope with a varying workload and working with minimal supervision. Starting salary dependent on age and experience. Company benefits include contributory pension scheme, four weeks' holiday, subsidised staff restaurant, company shop, social club and interest-free season ticket scheme (after six months).

Please write or telephone for an application form:
Miss Elizabeth Pinstone, Staff Department,

Opportunities in Advanced Software Development

Opportunities in Advanced Software Development

We are Europe's leading manufacturer of Automatic Test Equipment (ATE). Our continuing growth means that we now have a number of opportunities for you to join our young and expanding Software team, using advanced structural development techniques for design and implementation of ATE Software.

The team is now preparing further additions to the MB7700 range of ATE based on our own in-house micro-processor controller. The work includes:

- * High-level language compilers
- * Automatic program generation
- * Advanced fault diagnosis algorithms
- * Sophisticated program debug packages
- * Micro-processor system development

Whilst a knowledge of Automatic Test Equipment would be an

advantage, the typical requirements are education to degree level, preferably in computer science or electronics, and up to one year's experience, ideally in a scientific or technical environment, together with familiarity with languages such as Algol or Coral 66.

We are located in an attractive part of Dorset, with realistic house prices, close to Bournemouth and the New Forest.

We offer excellent starting salaries, depending on experience. Other benefits include a profit-sharing scheme, flexible working hours, four weeks annual holiday and, where appropriate, generous assistance to help you relocate to this area.

Telephone Steve Thurlow on Ferndown 893335, or, alternatively write sending details of your qualifications, experience and salary expectations - START ON A MEMBRAN PROGRAM TODAY.

Move into a new computer world with Halfords

It is unlikely that you will find a better offer in computers this year!

Not only will you have the rare experience of moving in on a new ICL 2950 installation and playing a key role in the design and implementation of a completely new programme: You will also be in a prime position to advance your career and your promotion prospects as our ambitious development plans unfold.

But that's only part of the story.

Our offices are located at Redditch in the heart of the beautiful Worcestershire and Warwickshire countryside. Housing is cheaper than in Southern England and we will give you a generous relocation allowance into the bargain.

Of course, living near Redditch doesn't mean that you're socially out to grass. In fact you will find life offers far more variety in every sphere of interest, and with little or no commuting problems there is more time left to enjoy life to the full!

You will be working for the leading retailer in Europe specialising in the motoring, cycling and leisure markets.

Apart from our 350 retail outlets, other Halfords interests cover wholesale cash and carry warehouses for motor accessories, our own cycle manufacturing plant, a cycle accessory wholesalers and a retailing chain in Holland.

With such a wide and varied range of Halfords products and activities it's not surprising that our plans through to the 1980's lean heavily on a committed computer programme.

ANALYSTS/PROGRAMMERS (UP TO £6,750)

SYSTEMS ANALYSTS (UP TO £7,500)

The challenge presented by the unique problems encountered within our retailing outlets will tax the ingenuity of the successful

applicant and test the capability of our 2950.

That's why we're looking for the most experienced people in the field to join us at Redditch.

The job demands an ability to work with senior executives in a variety of functions and to motivate systems staff.

There are also very good promotion prospects within this rapidly developing and important field.

SENIOR PROGRAMMERS (UP TO £6,450)

PROGRAMMERS (UP TO £5,500)

We need programmers with at least one or two years experience to implement the systems planned for our new computer installation.

Cobol knowledge would be useful, but not essential. We are prepared to retrain people who demonstrate aptitude and ability.

You will find the immediate tasks very rewarding and promotion opportunities outstanding.

If you are interested in any of these vacancies, write to us giving details of your experience to date, together with your present salary. Or telephone to make an appointment to come and see us. We will soon be holding interviews at various locations around the country and one of them could be near you!

Write for more details to:

Senior Systems Analysts: Let's get straight to the point in Wembley

If you've had at least four years experience of business systems development, we want to talk to you. Because you are one of the people who can help us to develop sales order and billing systems for our European network. It's a large scale operation based on IBM equipment.

Join us in London and you'll be with a major international group whose widely diversified interests are in chemical, natural resources and consumer products. More important to you, our broad spread of activities — and our

continuing expansion — is a virtual guarantee of attractive opportunities now and in the future. We'll be depending on creative men and women to keep pace with our growth.

Rewards for Senior Systems Analysts include excellent salaries, top-line benefits, European travel and a great deal more. For all the details, in confidence, phone or write to Keith James, Data Processing Manager, W. R. Grace Ltd., North's House, North Circular Road, London, NW10 7UH. Tel: 01-865 0611.

GRACE

U.S.A. PROGRAMMERS

We have a number of urgent requirements for computer personnel in the U.S.A. Most of the assignments are centred in the Mid-West and Southern areas of the U.S.A. and are for a period of 12 months.

We would like to hear from programmers with 2-4 years' experience of IBM OS, IMS, COBOL and TSO.

In addition we are looking for a database designer with 4 years' specialised knowledge of database systems work in an IBM, VSAM MFT, COBOL environment.

ORION IS -

ORION HAS - ORION NEEDS -

An International investment bank set up in 1970 by six of the world's major banks and now has assets exceeding £1 billion. It is a successful organisation which has gained an enviable reputation in the international banking environment and it has a young and progressive management team which creates a stimulating working atmosphere for over 300 staff in modern city-based offices.

Recently ordered the latest IBM 4341 and 3730 system to support its integrated DB/DC and word processing developments. It has organised three development teams to implement systems in major departments in the Group.

A SENIOR SYSTEMS ANALYST to select and lead a team in the development of a foreign exchange/money market system from feasibility study through to implementation. Essential attributes include a sound education, preferably to university degree level, proven experience in the management and design of at least one major project, and the ability to communicate effectively at all levels.

A TECHNICAL SUPPORT ANALYST to assist in the design and implementation of an integrated data communication and word processing network. The successful applicant must be able to communicate with all levels of management, possess a working knowledge of CICS/VS and DOS/VS, and must be keen to further develop this technical expertise.

SYSTEMS ANALYSTS to start work on the business system design phases of the Bank's Investment Banking and Syndicated Loans projects.

An ideal opportunity to join an expanding team at an early stage of the development programme.

PLUS: — an excellent salary
— non-contributory pension
— mortgage facilities at 2 1/4% interest p.a.

If you are interested you may like to attend an informal meeting at Orion to discuss our plans on Tuesday, June 5th or Thursday, June 7th between 5.00 p.m. and 8.00 p.m. If preferred, please ring or write to:

REDIFON NEEDS MARKETING PEOPLE

Redifon Computers, the second largest British-owned Computer manufacturer, is starting a major new expansion programme. This will complement an existing programme that has led to eightfold growth in the last five years.

Career-minded people are now needed throughout the U.K. for marketing appointments.

Are you eligible?

- 2 years' successful experience selling computers?
- Good educational background?
- Currently earning £9,000-£10,000 p.a.?
- Clean driving licence?
- Ambitious?

Tick the questions. If you score 4 out of 5 you could be selling the R-Range of data entry

and distributed data processing computer systems within months.

More than that, you could be established in a fast career development plan—backed up by thorough sales, marketing, technical and management training—with the British company.

Don't miss this opportunity to talk about your future. Call today:

Phil Northeast. Tel: 01-680 4756.
London/South/East Anglia/West Country.

Barry Roberts. Tel: 01-499 6791.
Major accounts and Financial Institutions in all areas.

George Snelgrove. Tel: 061-436 4114.
Scotland/North/Midlands.

REDIFON
COMPUTERS LIMITED
with you all the way

Member Company of the Redifusion Organisation

Most software people think for only 25% of the time

Even at Section Leader level, too many people in two many companies spend too much of their time on coding and documentation. And not enough on original, creative thought. Working on one of Europe's key avionics projects, our client has achieved a better balance—a good 60% of thought with only 25% documentation, and a mere 1% coding.

In fact, they're so far ahead of the field that following precedent is as much use as following your nose in thick fog.

The approach is to discard conventional thinking and ready answers, and think everything carefully through from sequence one.

If that's the way you like to work, you're a natural for our clients' environment, and for one of the new jobs their success is creating all the time. A job like one of these, perhaps.

Section Leader

Your section would be one of several working on systems that will simulate the systems operating environment, and you, people would handle technical design of specific parts of the system, working in very

tight requirement specifications. The man or woman our client is looking for will have at least three years' experience in mini-based real-time systems for scientific applications, for example, message switching or communications. Although your technical expertise is an important qualification, this is a job that will also test your own management ability.

Recent Graduates

If you're a man or woman with at least a year's practical experience in real-time systems for scientific applications, and experience in a high level language or Assembly, you could step straight into an active, thinking role in one of our systems teams. If you want to use your brain to the full, in a company where the rewards and the promotion opportunities come in full measure, write to Position Number BWM 7330, Austin Knight Limited, London W1A 1DS. Applications are forwarded to the client concerned, therefore companies in which you are not interested should be listed in a covering letter to the Position Number Supervisor.

AK ADVERTISING

Move into International EDP Audit

Your gateway to management

c.£8,000

City of London based

Worldwide Travel

What is EDP audit? The role of an EDP Auditor is to bridge that crucial gap between business management and the computer world. This involves the investigation and assessment of computer systems advising both management and computer departments on their correct usage.

Our client is one of the largest and most respected firms of Chartered Accountants in the world with offices in over 90 countries. An acknowledged leader in sophisticated audit techniques, they are now seeking to augment their successful computer audit group with several ambitious computer professionals.

Undertaking audit assignments for the company's clients at home and abroad you will assist in the development of techniques to examine data security and review procedures and controls employed in new and existing systems.

You should be a successful analyst in your mid to late 20s with around 3 years experience in the design of commercial systems and a broad overall knowledge of computer applications. You will have the ability to work on your own initiative and accept responsibility for dealing with user line management.

In addition to an excellent training programme which could lead to formal qualifications if desired, the company will be providing you with an ideal opportunity to develop your skills both inside and outside a data processing environment performing a consultancy function for international management. Excellent long term prospects exist to diversify into other areas of the company's business—a sound base from which to progress to senior management.

In addition to the excellent starting salary, benefits are in line with those normally offered by a large and successful multi national company.

Please telephone or write in the first instance to Graham Morgan ACA or Barry Latchford quoting Ref. 2388

Lloyd Chapman Associates
125, New Bond Street London W1Y0HR 01-408 1670

Our clients are a Swiss and U.K. based Data Communications Manufacturer. Their products are in the forefront of technology and they are enjoying substantial success in the OEM and End User Sectors.

The successful candidate operating out of their head office in the Bracknell area will take responsibility for the U.K., selling the most sophisticated range of computer and communications test equipment currently available and will be competent in dealing with all levels of commercial and technical management in this rapidly expanding market.

You can expect a high proportion of introductory business enabling you to meet the realistic quote, combined with excellent support that will ensure further market penetration.

Applicants should be self-motivated, confident and have a minimum of three years' successful sales experience in the communications environment.

THE REWARDS

Base salary to £7,000 on quota earnings £14K to £16K plus company car of your choice in the 2-litre class. Free private patients plan for you and your family. Non-contributory pension scheme and bonus.

If the prospect of joining a young, professional, results orientated sales force and an organisation structure offering real career prospects interests you:

County of Cleveland

COMPUTER SERVICES UNIT SENIOR PROJECT LEADER PROJECT LEADERS UP TO £6,500

The Unit provides a cost effective means of helping user departments optimise both functional efficiency and production economy. We have a few openings for people with systems experience to work in project design and implementation.

The Computer Unit provides a wide range of services ranging from finance in computer aided design. We are currently seeking to fill three new posts in systems design, created by expanding work loads on our IBM mainframes.

SENIOR PROJECT LEADER
£5,666-£6,513 (includes supplement)
This is a senior position requiring a mature approach. You will be required to lead, train and advise staff in system design, for commercial systems. You will also take a lead in shaping the Council's telecommunications systems and data bases. Ref. CO.093/CW.

PROJECT LEADERS
£3,232-£5,555 (includes supplement)
Two posts have been created for Project Leaders. You will lead small teams engaged in commercial applications. You will be required to demonstrate original ideas, in areas of computing requiring high throughput efficiency. You will be responsible for systems design and implementation of systems utilising database and advanced teleprocessing techniques. Refs. CO.084/5/CW.

All these vacancies are involved in the Council's development plans, and the prospects for career advancement and job satisfaction are good. The installation is using CICS/VS, APL, COBOL and commercial enquiry packages.

Cleveland County has a population of 566,000. It is an area of contrasts. Within close proximity to the main centre is an outstanding coastline and the North Yorkshire Moors. The Computer Unit combines all the advantages of a small organisation with the benefits of a large company. In addition to our competitive salary, we offer the usual excellent public service conditions of service including 21 days holiday and restaurant facilities. Reimbursement for the removal of household effects is paid in approved cases. Temporary housing accommodation may be available.

For further information and application forms, please ring Tony Whitehead on Middlesbrough (0642) 244188 Ext. 250. Alternatively write to Colin Schneider, 8th Floor, Rada House, 87 Corporation Road, Middlesbrough TS1 1LV. Please quote the appropriate reference.

TRESHAM COLLEGE NORTHAMPTONSHIRE LECTURER II COMPUTING AND DATA PROCESSING

Required from 1st September 1979 or as soon as possible thereafter to act as course tutor for the National Computing Course 'Threats' course and have overall responsibility for computer work at the College Centre. Appropriate industrial experience, essential; teaching experience desirable.

Salary in accordance with NORTHAMPTONSHIRE LEADER II scale £4101-£5515 (under review) point of entry determined by experience and qualifications. Further details and application form from The Principal, Tresham College, Kettering Road, Northampton NN16 9JL. Telephone Kettering 45555.

LOOKING FOR VARIETY AND CHALLENGE? BASED IN (OR CLOSE TO) MANCHESTER?

You will be involved at all levels, especially senior, in all kinds of organisations and with a wide range of disciplines.

You will be active in a wide variety of computing applications in both the private and public sectors.

You will be responsible for controlling the development of powerful and well designed systems for improved management control.

ADP Network Services is an international company providing interactive computing services for managers and businessmen.

We believe in accessible management and promotion from within. We are always prepared to recognise and reward self-motivated individuals.

We provide a professional development approach for our customers and expect our staff to demonstrate their abilities and experience.

The kind of people we need will have experience of:

ANALYSIS, DESIGN AND IMPLEMENTATION

You must be able to conduct the installation of a customer's system from the pre-sales stage through to the commencement of live running and be able to lead other members of project teams.

Education to 'A' level standard is generally expected (together with the capacity for hard work and applications in tough situations coupled with a sensitivity to the requirements of others).

Ring: Bernard Edwards 01-580 3715 or write: Bernard Edwards, S & P Manager, ADP Network Services Limited, 2nd Floor, Peter House, St. Peter's Square, Oxford Street, Manchester M1 5AQ.
